Fish Stocking Report: Bob Noga and Mike Krawczyk

Silver Moon Springs Fish Hatchery (Elton, WI) released approximately 1,920 5-8 Inch Walleye Fingerlings into Silver Springs Lake on Saturday October 25th, 2025.

Walley do not reproduce well in Wisconsin's inland lakes, and less so in shallow manmade lakes like ours. Healthy Walleye populations are maintained by introducing new generations annually.

One of our Silver Springs anglers, Ray Braun, reports regular catches of 12–18-inch Walleye. They are usually caught around sunrise and sunset... and good eating!

Bob Noga recommends fishing weed edges with Rapala Shad Rap crank baits, fat head minnows, leeches, or night crawlers.
