LAS VEGAS SPACEPORT

From the Edge of Space to Las Vegas in a Fraction of the Time
On May 7th 1920 the FIRST Airplane landed in Las Vegas

Randall Henderson was the Pilot

On the Centennial Anniversary of that date, May 7th 2020, we intend to dedicate the LAS VEGAS SPACEPORT
We are the:

NEVADA AEROSPACE COALITION

The group of experts who made the selection of NEVADA happen for it to become a UAV Test Site
McCARRAN and Nellis each have 2 Runways that can land the Dream Chaser Spacecraft (minimum 10,000 feet long)
IMMEDIATELY upon us being designated as a SpacePort, all airlines/airplanes flying to Las Vegas will have the notariety of landing at a SpacePort!

This not only adds to the fun of Las Vegas, it also reinforces the message in the minds of all visitors that Las Vegas is a High-Tech Aerospace Technology City!

Continual high-tech Las Vegas notariety is reinforced by flight crews every time they announce the destination of "The Las Vegas Spaceport" to passengers, perhaps getting the attention of business owners who can understand the Las Vegas Value proposition for possible relocation here.
Additionally, the Supersonic and Hypersonic traveling High-Rollers of the FUTURE can fly here from anywhere in the world in approximately 1-5 hours, depending on their vehicle:

The Dream Chaser Spacecraft would be the first vehicle to open the door to Las Vegas being designated as a SpacePort, enabling all these future vehicles to follow.
Placing the word "SPACEPORT" adjacent to the name: LAS VEGAS is the PERFECT streamlined way to convey the idea of a high-tech and diversified economy TO THE WORLD....

while spotlighting the spacefaring companies and technology we already have locally to build our brand upon
