

Grow a Pine Tree

1. Go to the woods. Bring a cone or few home. 🌲 🌲 🌲
2. Put the cone in a pot - so that most of it stands out.
3. Pour water on it every day, make sure it is a small amount of water, as excess water makes the cones rot.
4. After some time, a tiny tree will appear.
5. Congratulations - YOU just started oxygen production and you have a piece of forest in your own home. 🍁 🌿 ♻️.

Edited: YES place some soil/dirt under the cone and if you want use moss and decorative rocks on top of soil.. And water regularly.
