

BitMint has been qualified for the final round of the G20 TechSprint 2022 Global CBDC Challenge

/17th June 2022/ - BitMint has been shortlisted in the G20 TechSprint 2022 Global CBDC international competition organized by the 20 leading economic nations in order to explore cutting-edge technology-based solutions. This year, the Bank for International Settlements and the G20 through Indonesia Presidency supported by Bank Indonesia, announced the competition with a view to future-oriented central bank digital currency solutions.

There was an overwhelming interest in the competition, with many practical, yet innovative and game changing solutions proposed from teams around the world.

BitMint delivers a next-generation user-centric, quantum-safe technology for fair and affordable digital currencies with a superior offline functionality, designed from ground up to withstand the vastly improved processing power of quantum computers, enabling privacy by design while maintaining regulatory compliance, as well as non-discriminatory seamless, frictionless, free, secure access to digital currencies, empowering everyone including underbanked and unbanked and non-technology savvy users.

"Accessing BitMint's well known experience in cyber security and quantum randomness money is a great opportunity to benefit the society, to support the global CBDC and stablecoin research and to showcase to G20 and BIS our innovative fair digital money solutions, following a successful retail CBDC project in China", comments Amnon Samid, CEO of BitMint.
