

Facility Safety Checklist

5 CRITICAL QUESTIONS TO ASK YOUR DISINFECTION PROVIDER

1. Is your disinfectant on the EPA "List N"?

Verification: Ask for the EPA registration number. If it isn't on List N, it hasn't been validated for use against SARS-CoV-2.

2. What is the required "Dwell Time"?

Safety Check: Every chemical has a required time it must stay wet to kill 99.9% of germs. Your provider should know this number by heart.

3. Is the solution non-corrosive and pH-neutral?

Asset Protection: Harsh chemicals can ruin expensive office chairs, chrome fixtures, and electronic screens over time.

4. How do you handle "Pre-Cleaning"?

Protocol: You cannot disinfect a dirty surface. Ensure they wipe away visible soil before fogging for maximum efficacy.

5. Can you provide a post-service Certificate of Sanitization?

Liability: You need a paper trail for your employees and insurance to prove professional hygiene standards were met.
