

VEHICLE HANDLING BULLETIN

SUBJECT: Fuel Door Damage
MODEL: Infiniti / Nissan Models with Manual Fuel Door
DATE: 10/23/2020
REFERENCE: SCM 20/02B

SERVICE INFORMATION

Some Infiniti & Nissan models have fuel doors that open manually when pushed. The fuel door can unintentionally open during the loading process if a person's body contacts the fuel door. Loose clothing can catch on the open door or air pressure on an open door can cause damage to the hinge. This is especially critical for a unit loaded backwards on the head rack.

During final load inspection, inspect all fuel doors and close as required.

Exit Vehicle: STOP, LOOK and CLOSE
