

## RC10 Comical chassis

Thank you for your purchase!  
This is a 3" shorter chassis plate for the RC10. The chassis plate is either raw aluminum or powder coated aluminum depending on the version you purchased. These are drilled for both 6 gear and stealth, and can be used with our 3011 wrap around motor guard (for 6 gear) or the Team Associated guard. We have also drilled the chassis for our 3013 Pro front bumper. The chassis can be used for conventional suspension or trailing arms. We have included a set of roll center spacers for the rear suspension as you may have clearance issues with certain combinations of arms and blocks. These are not always needed.
