

Why you need regular dental check-ups

We believe that prevention is better than the cure!

Regular check-ups ensure that any minor work or cleaning gets done early, thereby avoiding major works in the future. With that as our lens, we do a few important things during your regular dental check-up and clean.

- ✓ We monitor your gum health to **prevent future tooth-loss**, and check for signs that may indicate oral cancer.
- ✓ We also identify **dental cavities** so they can be treated earlier before they causes you pain and more damage.
- ✓ If we notice abnormal **wear and tear of your teeth**, we help to identify the reason for it, and provide you with solutions to prevent it from getting worse.
- ✓ As **diagnosing issues early is key to treating them effectively**, we closely examine your teeth, gums, tongue, cheek, jaw bone and jaw joint, to ensure no problems go under the radar.
- ✓ And finally, we clean your teeth thoroughly to **remove stains** as well as **reduce bad breath**.

Done on a **regular** basis, this will help you maintain your best possible oral health and give you miles of smiles!

During your appointment, bring all your concerns about your oral health to your dentist. We are always here to provide **information, education** and **solutions** to your questions and problems.

At FamilyDent, we are your committed and experienced medical partner in keeping you and your family's mouth healthy for the long term.

It is for this reason we are offering FREE dental health checks for the months of December 2023 & January 2024.
