WELCOME TO INFECTO GENOME LABS

InfectoGenome Labs LLP is a next-generation Molecular and Genetic Diagnostic Laboratory, dedicated to transforming infectious disease detection and management through the integration of Advanced Molecular Diagnostics and AI-driven Intelligence.

Molecular laboratory testing refers to the detection, amplification, and quantification of pathogen-specific DNA or RNA sequences in patient specimens. Unlike conventional culture or serology, molecular assays provide high sensitivity, specificity, and rapid turnaround, enabling clinicians to make early and accurate decisions.

At InfectoGenome Labs, we perform highly complex molecular testing across infectious diseases, oncology-related genetic mutations, and hereditary conditions. Our scope also includes genotyping, antimicrobial resistance detection, and predictive biomarker studies, ensuring comprehensive patient care.

Headquartered in Hyderabad, Telangana, our facility is equipped with:

- State-of-the-art PCR platforms (including Real-Time PCR and Multiplex PCR).
- AI-supported data analytics for intelligent result interpretation and predictive insights.
- Stringent contamination control measures with dedicated laboratory partitions (sample addition, master mix, amplification, analysis).
- NABL- and ICMR-compliant protocols ensuring international quality standards.

OUR VISION:

- To provide reliable and actionable diagnostic results that directly aid clinical decision-making.
- To ensure timely reporting with a focus on rapid turnaround.
- To continually adopt innovative molecular methods aligned with global best practices.
- To deliver diagnostics with speed, accuracy, and reproducibility at par with international standards.
- To bridge science and healthcare by translating advanced research into real-world medical applications.

OUR MISSION:

- To integrate AI-powered diagnostics for enhanced accuracy, predictive modeling, and data-driven healthcare insights.
- To leverage an expert team with decades of combined experience in molecular diagnostics and clinical microbiology.
- To drive research and development initiatives, contributing to novel diagnostic solutions and improved patient outcomes.
- To employ cutting-edge PCR and molecular platforms with high sensitivity, specificity, and robustness, ensuring the detection of even low-abundance pathogens.

OUR GUIDING PRINCIPLE:

“INSIGHTFUL SCIENCE FOR BETTER CURE”

We believe that the future of diagnostics lies in the synergy of molecular science, artificial intelligence, and clinical expertise. By uniting these forces, InfectoGenome Labs is committed to supporting clinicians, hospitals, and public health systems in delivering faster diagnoses, better treatments, and improved patient care.
