

ELITEWOOD™

Degrees of Shade

2"x 3" Heavy Duty Tubes

Elitewood Shade Structures minimize harsh sunlight and heat, yet allow plenty of light and free-flowing breezes. Shade factors range from 50 - 70 percent and are achieved by simply reducing or increasing the spacing of the 2 x 3 inch heavy duty lattice tubes.

Note: Rafters and headers were taken into consideration when coefficient of shading was calculated.

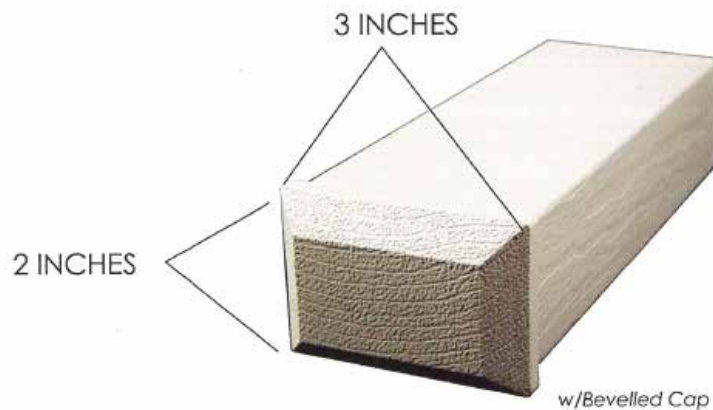

ELITEWOOD™

Features

- 2 x 3 inch heavy duty lattice tubes are dimensionally proportionate to the standard wood lattice planks.
- Heavy duty .024 inch thick aluminum is 33 percent thicker than other aluminum lattice tubes on the market which are typically .018 inches thick.
- Thicker lattice tubes allow for a stronger more durable lattice structure.
- 5 inch on-center (2 inch spacing) lattice tubes allow for increased shading and sufficient air ventilation, a full 70 percent shade factor is achieved.
- Multi-step coating system comes with a Limited Lifetime Transferable Warranty.
