

ALUMINIUM CONSERVATORIES

Aluminium conservatories are a great way to make the most out of the outside view, with the sleek thin frame design and larger glass area: you can feel more like you're in the outdoors without having to face the bad weather. Even though you might think that the aluminium frame will not be as strong as the bold PVC frame, you will be surprised with the results: as aluminium is so strong that it can be used for making roofs, facades, winter gardens and many more. The strength of the material makes it preferable in the construction of protective doors and fire barriers.

WALK-ON GLASS FLOORS

This is something that will transfer your house into a very **modern place**; it will be bold, transparent and noticeable. It is a natural source of daylight. PM WINDOWS 4 YOU take all the safety measures into account to make sure about your safety. Walk-on glass floors are perfect for **roof terraces, interior ceilings**. We can add colour electric lights if you wish.
