# IMPERIAL COLLEGE LONDON

**Imperial College's international reputation precedes it. Consistently ranked among the world's best universities. It is a one-of-a-kind institution focusing on science, engineering and business. The college boasts 14 Nobel price Winners including Sir Alexander Fleming.**

**A truly international community, Imperial has students from more than 140 regions around the world.**

## IMPERIAL JUNIOR SOLUTIONS

**Imperial Junior Solutions, the Junior Enterprise of Imperial College London, is a non-profit organisation which provides technical and engineering services to companies. IJS operates as a student-run consultancy and aims to deliver high quality services while providing students with the opportunity to apply their knowledge and gain valuable experience. Furthermore, it will facilitate connections between the students and corporations. Students can start gaining work experience within academic terms to have competitive advantage over other students when they apply for internships during the summer.**

**Clients will benefit from our students' excellent technical capabilities, soft skills, creativity and initiative at a very competitive price**

# PROJECT TIMELINE

## 1. Initial contact

Contact is made between IJS and the client advertising our services.

## 2. Project analysis

IJS determines the resources and time needed for the project.

## 3. Project proposition

IJS issues a quotation to the client.

## 4. Client approval

The project is approved by both parties.

## 5. Execution

Our team executes the project under the supervision of IJS and the Head of the project. Regular reports are written to the client.

## 6. Delivery

The final result is delivered to the client.

## 7. Evaluation

Feedback is sought from the client to help improve our services and train our students.

# OUR SKILLS

## Engineering design

One of the world's top engineering university, Imperial College London has 10 different engineering departments. Imperial forms engineers that go on to working in top consultancy firms yearly.

As part of a consulting project, IJS delivers work made by students born in the technology era with outstanding technical knowledge from all industry.

## Application and Website Development

The Computing Department focuses on developing essential core computing skills not only within the classroom but also by exposing the students to different projects like hackathons. As a result, the students learn how to adapt to challenges and opportunities of technological change. Our students excel in website development and IOS & Android development.

## Technical Translation

Boasting a truly international community (64% of students) Imperial College counts with students from 140 different regions. This allows us to be able to translate technical documents in more than 10 different languages.

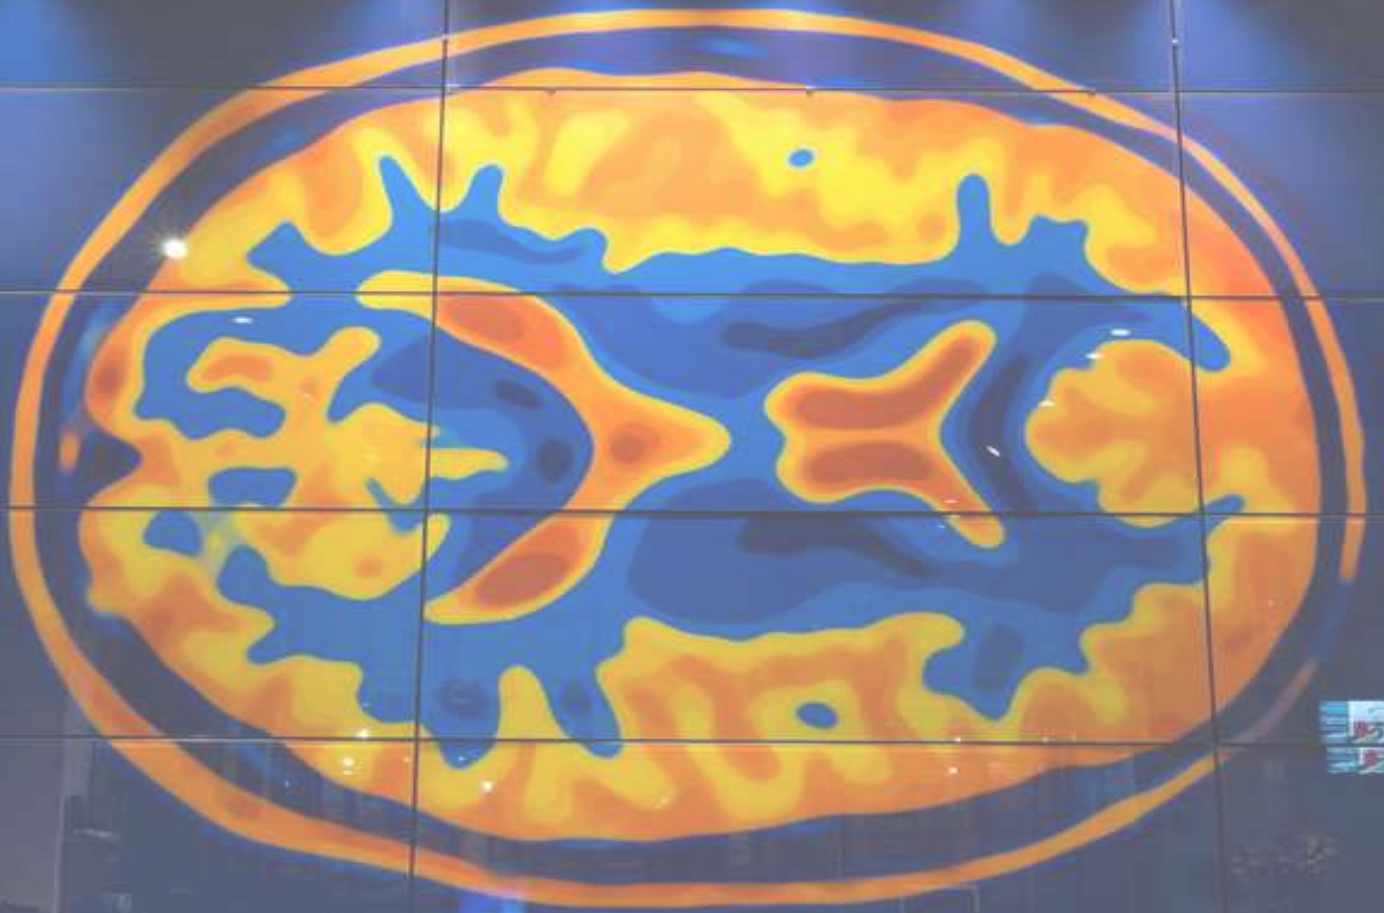

## Data analysis

Many Imperial College students possess valuable skills in data science, machine learning, image recognition and search optimisation.

Our long-term goal is not only to work with these students on our projects but also to develop a strong set of skills within our member base (by encouraging self-teaching and by training new members), and to undertake more complex projects.
