*Cutting life

SIGNaTuRe

The graphic arts sector requires increasing precision and speed in its cutting operations. SIGNaTuRe knives cut better and last longer, increasing your profits and reducing costs by improving the speed and quality of the cut—especially perfect longitudinal cuts—and extending the operational period between sharpening sessions. This also reduces the number of required sharpening sessions, minimizing 'dead time' during knife-changing operations and decreasing the risks associated with handling cutting tools, including accidents and material damage.

**SIGNaTuRe Prime
Cladded Steel knife**

High performance
quality. Steel alloy with
18 % wolfram.

Our extensive range of grades and alloys allows you to select the most appropriate knife for your requirements, whether longitudinal, trilateral, or circular, covering all possible areas in the paper, packaging, and graphic arts sectors. Choose the grade that best suits your production needs, considering purchase value, the time between sharpening sessions, and any additional costs.

**SIGNaTuRe Premium
High Speed Steel**

State-of-the-art sintered
metal, comprising 85 %
tungsten carbide and 15 %
cobalt.

Our manufacturing program includes all the most renowned guillotine brands, along with their corresponding cutting sticks.
