

HOW IS THIS CAMERA USED?

THROW UP FOR AERIAL VIEW

Throw ball in the air, over highest obstacle. Use to look over the wall or review saved video to see over wall at highest point.

ATTACH VIA POLE MOUNT

Attach the ball using one of the mount points. Use as a pole cam to look in crawl spaces, holes in the wall... Anywhere you wouldn't want to look or send your K9 in first... Provides a super quick 360° clear view.

LOWER INTO TUNNEL

Attach to the leash and lower it down into a spider hole or cave entrance. You can stay oriented even if ball is spinning.

ALTERNATE ROBOT SENSOR

Attach via magnet, tape, or 1/4" point to robot... Provides super easy-to-use alternative sensor on your robot.

THROW INTO ROOM/ BARRICADED SHOOTER

Throw into a room before making entry. Most suspects think it's a grenade and get away from it. You get intel of where they are and can talk with 2-way audio before taking action against the objective.

CALL OUT SUPPORT

Communicate with friendly forces on the objective and see what they are seeing within the structure.
