Ready-to-Load Brass

Pistol & Rifle | Primed & Unprimed | New & Reconditioned

RANGESPEC
RELOADING

RangeSpec Reloading, LLC is the premier manufacturer of reloading brass for precision-driven shooters. As a wholly owned subsidiary of Capital Cartridge, LLC, RangeSpec offers a wide selection of calibers for both pistol and rifle platforms. From primed to unprimed, from new cartridges to remanufactured, RangeSpec is a respected, high-quality source for true reloaders.

QUALITY IN PRODUCTION

Quality and Precision

Every cartridge case produced by RangeSpec Reloading is Quality Control Inspected throughout our multi-stage process. Each case must meet our strict dimensional requirements before it continues on in the production process. All products produced by RangeSpec conform to SAAMI specifications.

Best Value in Brass

RangeSpec offers its products with confidence, knowing you're getting a high-value product that compliments your reloading efforts. Consistent quality equals consistent accuracy – at a price that optimizes your bottom line. RangeSpec understands the true mindset behind reloading... performing that once in a lifetime shot.

RECONDITIONED BRASS

RangeSpec offers two options in reloading brass: **New Brass** and **Reconditioned Brass**. Reconditioned brass, which can be described as brass that has been previously fired and subsequently remanufactured into 'like new' condition, makes a good option to most reloaders. The obvious advantage is a much lower cost.

Under normal operating conditions, brass cartridges have a lifespan greater than a single shot. Unfortunately for the reloader, returning the cartridge back to pre-fired condition takes multiple steps and highly specialized equipment that may not be available to most reloading hobbyists.

That's where RangeSpec comes in. Our comprehensive reconditioning process ensures our products are fully restored and ready to load...at a much cheaper price than new brass. Different calibers have different reconditioning needs. RangeSpec takes out the guesswork by performing every step needed to restore to within its original SAAMI specifications for optimal, like-new performance.

Reconditioning Process

1 | Sort (remove defective brass)

2 | Deprime

3 | Ream / Prepare Primer Pocket

4 | Resize (full length)

5 | Trim (OAL)

6 | Wash / Rinse / Polish

7 | Inspect (final QC)

RECONDITIONED & UNPRIMED BRASS

RIFLE
