

"The Solution Is Science®"

Formulating advanced chemistry and lubricant solutions for the metalworking industry.
Products proven to improve manufacturing performance, part quality and cost savings!

INDUSTRIAL CLEANER

K110 Pre-Treatment Cleaner

Multi-Metal Formula

- 1) Thorough Surface Cleaning** - Dirt, oil, grease, wax and rust repel surface coatings and paint. Our pre-treatment cleaners prepare metal surfaces for uniform coverage of paint, coating or plating.
- 2) Removal of Surface Coatings** - Primers, paint and other chemicals can prevent proper adhesion to metal surfaces. Complete and even removal is achieved in preparation for finishing stages.
- 3) Reduce Surface Static** - Electrostatic interference is a common challenge for metal surface adhesion. Thoroughly cleaning is required to have none or to have an even electrostatic charge.
- 4) Minimize Surface Defects** - Uneven surfaces or flaws in material consistency can be the cause of uncoated patches or gaps. Proper pre-treatment enables these areas to receive uniform coverage.

K100 is a heavy duty spray alkaline cleaner. K100 is designed to remove heavy oils and grease from steel and some aluminum surfaces. This formula has an exceptionally effective blend of synthetic detergents with moderate alkaline inorganic salts serving as a base.

This cleaner was developed to insure excellent recess penetration, rapid wetting of the surface, fast and efficient removal of grease deposits and complete displacement and emulsification of oils.

As the oil is emulsified it does not lie on the surface of the tank to be re-deposited as work is removed.

K100 is an alkaline material.
Avoid contact with eyes, skin and clothing.

Wear goggles and protective clothing.
Flush exposed areas with clear cold water immediately upon contact.
