Operations Director Administrative Report

01/05/2022

- **Maintenance staff continue to address heating issues at both the middle school and high school buildings. An old air handler in the middle school gym area is being resurrected to help with additional heating in the gym. The compressor is ready for install to help with heating in the middle school as well.**
- **The high school kitchen sink, which has been down for a very long time, was installed over break. This will allow the kitchen staff the ability to clean mops and buckets in the kitchen, rather than doing so at a custodial closet.**
- **DMD Environmental was out to do some asbestos remediation in the pool mechanical room and areas in the high school. This will allow access for the natatorium project, as well as getting heating coils repaired/ replaced in other areas.**
