PERMANENT MAKEUP

& PARAMEDICAL RESTORATIVE TATTOO

Pre-Procedure Instructions

Before committing to a permanent makeup procedure, here are some considerations. ALL PERMANENT MAKEUP PROCEDURES REQUIRE 2-3 VISITS TO COMPLETE. A touch-up procedure is required approximately 4-6 weeks after your initial appointment. Both the initial application and touchup are included in the procedure price, provided your touchup is completed **within 90 days of the initial application**. Clients that do not return within the allotted 3 month period may be subject to additional charges. It is important to remember that permanent makeup is an art and not an exact science. Much of the success of your final outcome is dependent upon how well you follow the post procedure instructions as well as your own body's ability to retain the pigment.

ALLOW TIME FOR HEALING: Recovery time varies from client to client. To be safe, do not schedule social plans for 1 week following a permanent makeup procedure. Brow & Lip procedures undergo many changes and will initially appear too dark, thick, painted, etc. During this time, treated areas must remain clean, dry and after-care adhered to.

Maintenance: Although it is called "permanent makeup", most procedures last on average 3 years. A yearly color boost is recommended to keep you color looking fresh. The longevity of your permanent makeup depends on skin quality, lifestyle, after-care, color choice, medications, etc.

DO NOT EXERCISE BEFORE YOUR PROCEDURE APPOINTMENT. IT WILL RAISE YOUR BLOOD PRESSURE AND INCREASE RISK OF EXCESSIVE BLEEDING AND LOSS OF PIGMENT.

Payment is expected in full at the first visit, unless arrangements are discussed in advance.

Permanent makeup is not an exact science therefore there are NO guarantees and NO refunds.

ABSOLUTELY NO LASH OR BROW GROWTH SERUM FOR 6 WEEKS BEFORE AND AFTER PERMANENT MAKEUP PROCEDURES. (such as Latisse®, RapidLash®, or RevitaLash®, Grande Lash®)

Eyebrows: Avoid tweezing, waxing, electrolysis, and coloring your brows for two weeks prior to the procedure if possible. This will allow your practitioner the most flexibility to achieve optimal results.

Eyeliner: DO NOT WEAR CONTACT LENSES DURING OR IMMEDIATELY FOLLOWING THE PROCEDURE. Remember to bring your glasses. You may resume wearing your contact lenses as soon as your eyes return to their pretreated condition.

Lips: If you have any history of cold sores/ fever blisters/ herpes simplex, you must contact your physician to obtain the proper prescription medication to prevent such outbreaks for at least 4 days before and after the procedure. Many physicians prescribe **12 capsules of 500mg Valtrex**. Follow your physician's instructions. Two or three applications may be required to achieve the desired results. It is not uncommon to lose up to 70% of the color on the first application.
