One Code for All Indian Languages

Our Journey so far... Dreamchip Electronics Private Limited | November 2022

Challenge	There are 22 languages in India spoken by ~140 crore people. In the digital age, knowledge sharing for education, telecom, defence, banking, manufacturing, research and administration is a major challenge.
Solution requires	 "One Code for all Indian Languages" leveraging the similarity in the "Varnamala" that forms the foundation for words and sentences in all the Indian languages. Affordable Smart Information Devices (SID) that support the above code. A System-on-Chip (SoC) design for building the above SIDs
Imagine	 National anthem, "Jana Gana Mana" coded <u>Once</u> for all Indian languages and rendered in any language! Children having access to learning material in their language and on their SID.
Dreamchip Siddhi SID	 SANSKRITI - An efficient code specification for all Indian languages developed by Dreamchip & published by SCCI. Siddhi Digital School Bag - An SID designed and developed for the Indian Child SiddhiLite - A 32-bit synthetic processor and SoC with support for SANSKRITI realized on a low-cost FPGA
Technology	Dreamchip used SANKHYA Teraptor SPDP (Synthetic Processor Design Platform) an advanced Indian technology for developing Siddhi SoC.
Road Ahead	 Add script (Lipi) support for all Indian languages Integrate NLP and Machine Translation for Bharata Bala Siksha Add Upamaedha (SOIL) voice input and output support Scale to meet demand across India
