Math HL/SL : Applications and Interpretation

MAI HL/SL

THE SPECIAL PREPARATION

WITH **SAM'S ACADEMY**

HL/SL Applications and Interpretation Common Topics

TABLE OF CONTENTS

7. EXPONENTIALS AND LOGARITHMS

AI 7.1 Exponential functions and Graphs of exponential functions

AI 7.2 Exponential equations

AI 7.3 Growth and decay

AI 7.4 Logarithms

8. TRIGONOMETRIC FUNCTIONS

AI 8.1 The unit circle

AI 8.2 Periodic behaviour

AI 8.3 The sine and cosine functions

AI 8.4 General sine and cosine functions

AI 8.5 Modelling periodic behaviour

9. DIFFERENTIATION

AI 9.1 Limits

AI 9.2 Rates of change and Instantaneous rates of change

AI 9.3 The gradient of a tangent

AI 9.4 Differentiation, The derivative function and Rules for differentiation

10. PROPERTIES OF CURVES

AI 10.1 Tangents and Normals

AI 10.2 Increasing and decreasing, Stationary points

11. APPLICATIONS OF DIFFERENTIATION

AI 11.1 Rates of change and Optimisation

AI 11.2 Modelling with calculus

12. INTEGRATION

AI 12.1 Approximating the area under a curve

AI 12.2 The Riemann integral and The Fundamental Theorem of Calculus

AI 12.3 Antidifferentiation and indefinite integrals

AI 12.4 Rules for integration

AI 12.5 Definite integrals

AI 1.6 The area under a curve

13. DISCRETE RANDOM VARIABLES

AI 13.1 Random variables and Discrete probability distributions

AI 13.2 The binomial distribution

14. THE NORMAL DISTRIBUTION

AI 14.1 Introduction to the normal distribution

AI 14.2 Calculating probabilities and Quantiles

15. HYPOTHESIS TESTING

AI 15.1 Statistical hypotheses

AI 15.2 The χ^2 goodness of fit test

AI 15.3 The χ^2 test for independence

AI 15.4 Student's t-test

16. VORONOI DIAGRAMS

AI 16.1 Voronoi diagrams

AI 16.2 Constructing Voronoi diagrams

IB Math Applications and Interpretations : HL Only Topics
TABLE OF CONTENTS

1. FURTHER EXPONENTIALS AND LOGARITHMS

AIHL 1.1 Growth and decay

AIHL 1.2 The logistic model

AIHL 1.3 Logarithms and Logarithmic scales

2. DIRECT AND INVERSE VARIATION

AIHL 2.1 Direct variation and Powers in direct variation

AIHL 2.2 Inverse variation and Powers in inverse variation

AIHL 2.3 Determining the variation model

3. NON-LINEAR MODELLING

AIHL 3.1 Logarithmic models and Exponential models

AIHL 3.2 Power models and Problem solving

AIHL 3.3 Non-linear regression

4. VECTORS

AIHL 4.1 Vectors and Geometric Operations

AIHL 4.2 Vectors in the plane or the space

AIHL 4.3 The scalar product of two vectors

AIHL 4.4 The vector product of two vectors

5. VECTOR APPLICATIONS

AIHL 5.1 The vector equation of the line on 3D

AIHL 5.2 The angle between two lines

AIHL 5.3 Constant velocity problems

AIHL 5.4 The shortest distance from a line to a point

6. COMPLEX NUMBERS

AIHL 6.1 The complex plane

AIHL 6.2 Polar form and Exponential form

AIHL 6.3 Modulus and argument and Geometry in the complex plane

7. MATRICES

AIHL 7.1 Matrix structure

AIHL 7.2 Matrix operations

AIHL 7.3 Matrix determinant and inverse

AIHL 7.4 Systems of linear equations

AIHL 7.5 Eigenvalues and eigenvectors

AIHL 7.6 Diagonalization

8. MATRIX APPLICATIONS

AIHL 8.1 Markov chains

AIHL 8.2 Affine transformations

9. GRAPH THEORY

AIHL 9.1 Terminology

AIHL 9.2 Eulerian circuit and trail

AIHL 9.3 Journeys on graphs

10. TREES AND CYCLES

AIHL 10.1 Trees, Minimum spanning trees (MST) and Minimum connection

AIHL 10.3 The Chinese Postman Problem (CPP)

AIHL 10.4 The Travelling Salesman Problem (TSP)

11. FURTHER CALCULUS

AIHL 11.1 Calculus Review

AIHL 11.2 Integration by substitution

AIHL 11.3 The area between a curve and the y-axis and Volumes of revolution

AIHL 11.4 Kinematics

12. DIFFERENTIAL EQUATIONS

AIHL 12.1 Solutions of differential equations and Separable differential equations

AIHL 12.2 Slope fields

AIHL 12.3 Euler's method of numerical integration

AIHL 12.4 Coupled differential equations

AIHL 12.5 Second order differential equations
