ABINGDON, MD – Harford County based firm, Burkins Armor Consulting, LLC is pleased to announce that it has joined forces with New Lenox Ordnance, a division of Illinois-based New Lenox Machine Co., Inc. to provide a one-stop solution for the ballistics industry's testing needs.

Currently, New Lenox Ordnance provides armor piercing projectiles used to test anything from body armor to heavy tank armor. The company also manufactures a variety of gun and cannon barrels, and its facilities include a 200-foot indoor test range.

Burkins Armor Consulting, LLC is headed by Matthew Burkins, whose expertise includes more than thirty years in military weapons testing and research, as well as extensive knowledge of test range design. Until December 2017, Mr. Burkins led the U.S. Army Research Laboratory's Tactical Systems Protection Team. In that capacity, he helped design armor and vehicles that saved the lives of countless American and allied warfighters.

"I look forward to using my experience to help raise awareness of New Lenox Ordnance's quality products and unique capabilities," said Mr. Burkins.

Burkins Armor Consulting, LLC is based in Harford County, Maryland, convenient to the Army's Aberdeen Proving Ground, as well as to numerous independent testing facilities and government contractors' offices.
