

CREEDX SOCIAL PAPER v1.2

8th december 2021

CREEDX is a side project of CREED TRC20 on the tron and bsc networks.

CREEDX is a social crypto experiment. Meaning the project is designed to see the human reactions and interactions. Everyone participating in the project fully accepts their own risks. The idea of the concept is fully designed on creating a value by the community and in the end the developers will leave it as a free smartcontract with an organic supply on justswap.io and <https://justmoney.exchange/> When it is all released it will be a crypto asset and store of a value on tron network with no governance.

Creedx Trc20 Tokenomics

There will be 1 000 000 000 000 000 creedx created on tron and will be distributed as follows:

800T CREEDX is burned leaving the supply down to 200T including presale and liquidity on swaps

FREE CREEDX PLAN

When all packs are sold, the main liquidation wallet will remove 50% of the liquidity. 100% of The CREEDX removed from swap liquidity will be burned to lower the circulation to a much lower amount. 90% of The TRX removed from swap liquidity will be used to buy CREEDX from liquidity to boost the price on swap at once providing large gains on CREEDX holders and again the bought amount will be burned. 10% of the TRX will be shared between CFB holders and CREED TEAM. And the team will free the smartcontract to crypto space.

CREEDX Concept and Goals

The idea behind the project is to create value and free it from all governance issues. The team's role in this project is to manage swap liquidity and let it become people's own money. When this role is achieved there is two expected results:

- A token truly valued and governed by community like bitcoin.
- Create and add a true value on tron network to increase the exposure of the tron network

On condition that the final phase is not reached until 1st March 2022 the team will distribute the presale buyers share and burn the remaining CREEDX on any team accounts. In the worst scenario the CREEDX project will be free from governance in March 2022.

CREEDX BEP20 ADDITION

On 25th October 2021 CREEDX BEP20 will be listed on pancake swap to increase exposure of the project. The listing on pancakeswap will be usdt/creedx to minimize the effect of market fluctuations and provide a more stabilized price balancing with tron network. Total supply will be counted as one on bought TRC20 and BEP20.

TOKENOMICS ON CREEDX BEP20

CREEDX will be supplied 500T and an equal amount will be burned from Tron network supply of 1 Quadrillion.

CREEDX will be liquidated on pancakeswap with \$0,000000005 price

The supply is burned down to 2T on 4th December 2021 as a part of Free CREEDX plan:

1T on the team wallet locked for future exchange requests. 500B will be burned after March 2022. The remaining 500B will be kept until 2023 for exchange listings proposal. If no exchange listings it will be burned on 2024.

400B on team wallet locked until 2023. In 2023 the team may start selling at maximum 10% yearly. First year 40B, next year 36B and lowering every year.

600B circulating supply including the liquidity on pancakeswap.

The liquidity pool tokens are burned on 50% to maintain a price floor. The remaining 50% will be used on the end game plan creating a 100% governance free liquidity for the holders in March 2022.

Total supply will keep on lowering due to transactions happening on the network providing a passive income.

CREEDX BEP20 PRINCIPLES

CREEDX contract on BEP20 will work as follows:

3% will be auto-burned 4% will be distributed to holders 3% will be distributed to Team

BEP20 holders will also be participating in the ROAD MADNESS event and their rewards will be paid in USDT equal to TRX reward. Pancakeswap will also initiate the End Game Event in March 2022 at the same time as Justmoney and will be free from governance.

CREED ENERGY PROGRAM FOR TRON NETWORK

Tron network requires TRX burn (as fee) or energy to perform transactions. Renting the energy saves upto 80% of the regular cost. Creed team will provide cheap energy to private users and projects to build an income and back up CREEDX. Renting costs may change due to network costs and market prices.

The energy is rentable with TRX directly paid to team members. Starting after March 2022 the energy program will be fully supporting CREEDX. On condition that the requirements are met, the Creed team may start it earlier.

a 20% discount will be applied on rentals with CREEDX.

20% of the TRX used rentals will be used to buy CREEDX from swaps and the amount bought will be burned.

Disclaimer

CREED TEAM holds no responsibility for loss of any kind of value for CREEDX users. Since crypto still has its own risks each and every participant in the project accepts to calculate their own risks.
