What benefits can I expect from E-50 Skin Booster?

E-50 Skin Booster, powered by salmon-derived exosomes and advanced bioactive ingredients, delivers an instant visible lifting and skin-firming effect, while progressively refining tone and texture.

Professional application following microneedling enhances absorption and optimizes results. With continued use, E-50 Skin Booster supports:

- Improved firmness, elasticity, and surface definition.
- Reduction in redness and uneven tone for a balanced complexion.
- Visible smoothness and luminosity that reflect healthy radiance.
- Enhanced comfort and calmness after energy-based or resurfacing procedures.

How soon can results be seen?

Visible radiance and firmness can be observed immediately after the first session. Progressive improvements in texture, tone, and definition typically appear within 15–25 days, following the recommended protocol.

How often should E-50 Skin Booster be used?

For best results, schedule treatments every 2–4 weeks initially, then once monthly for maintenance.

Regular use keeps the skin in its most responsive state, maintaining the lifted, firm, and radiant look achieved from the first applications.

Are there side effects?

E-50 Skin Booster is generally well tolerated. Mild redness or sensitivity may occur temporarily at the application site, especially following microneedling, and typically resolves within hours.

Always consult a qualified professional for post-procedure guidance.

How does PrimaCure ensure the integrity of E-50 Skin Booster?

Each batch of E-50 Skin Booster undergoes verification through the EVSTA (Extracellular Vesicle Standardized Tracking and Analysis) system, confirming concentration, purity, and marker presence (CD9, CD63, CD81).

This ensures consistent product quality, safety, and bioactivity for dependable performance in every treatment.

2-step system: Dry Ampoule + Solvent Ampoule

- Immediate Lifting
- Visible Firming
- Refined Radiance

Professional application for visibly lifted and glowy skin.
