

Detroit SonoWAR 2024

#8 Emancipation Station

Your party is exploring the historic Detroit Salt Mines. In 1895, a large vein of rock salt was discovered in the Detroit area that was deposited 400 million years ago, as ancient bodies of water in the Michigan Basin were separated from the ocean and then evaporated. In 1910, the Detroit Salt Company completed a 1,060-foot shaft that was one of the most impressive engineering accomplishments of its time.¹

While exploring this mine, you become separated from your group and your arm gets stuck under a large boulder of Detroit salt. You have no choice but to cut your own arm off in a desperate bid for freedom.
