Explanation of Services

JP Compliance Services specializes in consulting Power Distribution Equipment and Electrical Service providers that are subject to Regulations as stipulated by the Environmental Protection Agency and the Toxic Substances Control Act as pertains to the management and recordkeeping of Polychlorinated Biphenyls (PCBs).

I own JP Compliance Services LLC. I have 16+ years of professional experience in Environmental Management specifically geared toward the power distribution service industry. I am a Certified Environmental and Safety Compliance Officer as recognized by the National Registry of Environmental Professionals, as well as a Certified Safety Management Practitioner as recognized by the Institute of Hazardous Materials Management.

My capabilities focus specifically on consultation and guidance regarding management, storage, transportation, and recordkeeping pertaining to PCBs. These services may include:

- In House PCB Management and Recordkeeping consultation and evaluations (i.e., Internal Audits, PCB Annual Document log review/maintenance, etc.)
- In Field, Warehouse and/or Job Site PCB Management Evaluations (i.e., Internal Audits)
- Internal Audits will closely follow those guidelines for inspections as laid out in the EPA PCB Inspection Manual for inspection of Records, Marking, Storage, Transportation and Disposal regarding PCB waste.
- Written report(s) will follow internal audit(s) with suggested corrective actions, as needed if potential concerns exist, and appropriate follow up at no additional cost.

Additional services are:

- On Call telephone support for PCB related questions, concerns or events.
- Associate PCB awareness training that includes background of PCBs and PCB Identification, Handling awareness and Spill Response
- Development of Standard Operating Procedures for PCB Management

These services may be conducted for your business based on the frequency needed. Frequencies may vary depending on amount or level of PCB handling conducted. Options and/or combinations of services are available and may be quoted separately. Terms and Conditions Apply.

While providing power in a safe and efficient manner to the consumer is priority, having extraneous concerns about PCB compliance should not be a burden. My mission is to be a valuable resource to the Power Distribution Industry, to increase confidence in PCB Compliance Programs, to minimize exposure and risk of non-compliance.

Best Regards,
