

Computer Defense Force LLC

Core Service: Penetration Testing & Threat Modeling

Computer Defense Force LLC provides advanced Penetration Testing services designed to uncover vulnerabilities before adversaries can exploit them. Our team simulates real-world attacks on your systems, applications, and networks using both automated and manual testing techniques. We go beyond compliance to provide in-depth threat modeling that prioritizes risk and delivers strategic remediation recommendations.

Our experts are veterans of U.S. Cyber Command, NSA, and DoD Red Teams, capable of conducting a wide range of engagements including:

- Black Box, White Box, and Gray Box Testing
- Web Application and API Security Assessments
- Social Engineering and Phishing Campaigns
- Physical Security Breach Simulations

Each test is followed by a detailed report outlining findings, risk severity, attack paths, and customized mitigation strategies.
