Your pup has been dewormed every 2 weeks from birth, therefore there is no guarantee on worms, mites, coccidiosis, giardia, demodex, or kennel cough which can be issues associated with stress, new environmental factors (your soil & water) and boarding. These are all too common in puppies, they can be treated and are not life threatening with proper meds and care.

Vaccinations should not be administered earlier than 3 weeks apart or more than 4 weeks later. Rabies should not be given before 12 to 16 weeks of age. It is up to you to continue monthly worming procedures and flea control for a happier & healthier pet. Routine vet checkups and vaccinations are also required. Feeding a good quality low fat food for Mini Schnauzers goes a long way in the future & health of your pup.
