Re-Sol-Africa (Pty) Ltd.

About Re-Sol-Africa

Re-Sol-Africa, an esteemed partner of PrefabSA, established in 2012, stands as a pinnacle of innovation by seamlessly integrating established enterprises into a cohesive and dynamic Business Solution unit. Our unwavering commitment to environmental stewardship propels us to the forefront of the industry, where we excel in providing comprehensive and cost-effective solar solutions. Specialising in turnkey installations and the supply of premium solar products, we ensure unparalleled quality and efficiency in every endeavor.

Backed by rigorous verification and accreditation processes, we empower our clients to make significant strides in energy efficiency and environmental responsibility. At Re-Sol-Africa, we don't just offer solutions; we foster a transformative journey towards sustainable energy practices, enabling our clients to thrive in a greener future.

Vision & Mission

Vision

To be an integral part of shaping a sustainable future for Southern Africa, Re-Sol-Africa. We aspire to play a pivotal role as catalysts for change, weaving innovation and environmental responsibility into the fabric of Southern African communities. Through our unwavering dedication to excellence and local empowerment, we aim to redefine the energy landscape, fostering economic growth and expertise while preserving our precious natural resources. By harnessing the power of the sun and cultivating direct ties with global and local suppliers, we envision a Southern Africa ablaze with solar brilliance, where every home, business, and community thrives under the sustainable growth.

Mission

We're committed to revolutionising the energy landscape with top-tier solar solutions that surpass industry standards. Through direct partnerships with global and local suppliers, we procure premium solar products, prioritising local support to foster community economic growth and expertise. Our skilled team ensures reliability and stellar performance, guaranteeing the highest quality standards in every installation. With comprehensive quality guarantees and exceptional backup support, we provide unparalleled service and peace of mind to our clients. Committed to cleaner energy solutions at competitive prices, we strive to exceed the highest environmental protection standards, forging a sustainable future for generations to come.

Products

Source | Import | Supply

Sunsynk Solar specializes in advanced solar inverters and batteries, offering innovative solutions for residential, commercial, and industrial applications.

With a focus on reliability and efficiency, their products empower customers to harness solar energy effectively, reducing reliance on traditional energy sources and contributing to a sustainable future.

Deye is dedicated to providing complete photovoltaic power system solutions, including residential and commercial power plants solutions.

Deye offers the right device for each application: for all module types, for grid-connection and stand-alone grids as well hybrid inverter system, for small house systems and commercial systems in the Megawatt range.

JA Solar designs, develops, manufactures and sells solar cell and high-performance photovoltaic products for residential and commercial solar systems, globally.

JA Solar manufactures some of the most affordable, quality solar panels for sale in South Africa. Their Monocrystalline cells are the perfect solar panels for home and business use because they function well in the heat and low light conditions.

Anern solar street lights saves electricity bills and expensive maintenance. Providing quality solar street lights with excellent corrosion resistance & water and dustproof feature.

Anern ensures stability in performance and quality across all its all-in-one solar street lights through rigorous adherence to international standard management practices and strict quality control measures.

Our Services

Re-Sol-Africa (Pty) Ltd.

Grid-Connected Systems

In grid-tied systems, we connect your solar panels to your home's electricity supply, prioritising solar energy usage. Excess solar power is either fed back into the grid or stored for later use. Payment methods for surplus power vary by location, with options including net metering or reduced rates through smart meter installations.

Off-Grid Systems

A backup system prevents disruptions during power outages by storing energy in batteries, ensuring seamless operation during grid failures. It can power selected areas such as lights, TV, alarm, and microwave, with the system cost varying based on the number of items connected. Backup systems can operate independently or in conjunction with solar panels, where surplus solar energy charges the batteries and excess energy can be exported to the main grid.

Solar Lighting

Our all-in-one solar lights redefine outdoor lighting with cutting-edge technology, combining high-performance solar panels and advanced LED chips for maximum efficiency and durability. With a hassle-free 'plug and play' design, installation is easy and maintenance is minimal. Featuring monocrystalline solar panels and high-brightness LED chips, these lights withstand challenging weather conditions with their waterproof design. Equipped with high-capacity batteries, they offer extended hours of reliable operation, providing sustainable outdoor lighting solutions.
