

Dear Veterinary Professional,

Thank you for being the veterinary care provider for this Darrfield Dalmatian. We would appreciate your inclusion of this letter in the puppy's health record file.

Health Certificate

Your client's puppy should arrive at its first vet visit with prior veterinarian-performed vaccinations, deworming(s), microchip number, and any observations made by our examining veterinarian. Puppies go home with a negative fecal, deworming and vaccination by our veterinarian, as required by Virginia law.

Socialization Risk

Because you know the local epidemiological landscape better than we possibly can, we have recommended to our puppy family that they consult you on the safety of socializing their puppy in your locale prior to completion of their puppy vaccination series.

Parental Health Clearances

We only breed dogs that are fully health cleared, with minimum testing including OFA Radiographic Hip Evaluation or PennHIP Evaluation, B.A.E.R. hearing test, Autoimmune Thyroiditis Screening, and full DNA panel. We are happy to share parental health clearance results on request. We also qualify our breeding dogs for temperament as well as proper structure.

While health clearances for many conditions are not available yet, we do not breed dogs from lines with known hereditary issues, such as seizures or Addison's. However, as you know, Addison's is prevalent in Poodles, so there is always a possibility of that appearing in a Goldendoodle puppy. To date, our rate of Addison's known to be in our puppies is under 0.2 percent; with no puppies to date ever developing seizure issues. We do not line breed or inbreed and endeavor to produce puppies with a coefficient of inbreeding of 5% or less; when evaluated with genetic COI testing, the majority of our puppies tested have a COI of 0 to 1%

Food

Our buyers have been asked to keep their puppy on pawTree's Real Salmon, Peas & Sweet Potato Recipe, and Gastro Pro Plus. The information on these products is below. If for any reason you do not agree with this selection for this Dalmatian and wish to advise the

owner to switch foods, please contact us to let us know why. We would greatly appreciate the feedback.

Food Is The Foundation Of Good Health!
Our food is highly digestible, nutritionally dense and rich in animal-named proteins, vitamins, minerals and antioxidants. With more nutrients per calorie and more nutrients absorbed for energy, you'll see reduced stool volume and feed less pawTree food than most other brands. We carefully craft every recipe to ensure you're feeding your pet to fuel their body — not just fill it. Formulated for all life stages, your dogs can enjoy this delicious recipe from puppy stage to golden years!

See a difference. Feel a difference. Make a difference.®

WHY PAWTREE IS THE BEST FOR YOUR PET!

- Real salmon is the first ingredient
- High protein
- Antioxidant-rich formula
- Natural source of DHA – supports healthy brain development and function
- Contains Taurine to support heart and eye health
- Contains prebiotics to support a healthy digestive tract
- Balanced Calcium and Phosphorus for bone and tooth health
- Contains Omega-3 and Omega-6 Fatty Acids for a healthy skin & coat
- A good source of Glucosamine to help maintain joint health
- No added sugars or sweeteners
- Formulated for reduced stool volume
- Complete and balanced nutrition for dogs with added vitamins and minerals

REAL SALMON, PEAS & SWEET POTATO RECIPE

A delicious combination of salmon, peas and sweet potatoes, with chickpeas, flaxseed, apples, blueberries, cranberries, pumpkin, papaya, spinach and parsley.

DAILY FEEDING GUIDELINES

Sudden changes in diet can sometimes result in digestive disturbances. Overfeeding is a common cause of digestive upset. Do not overfeed regardless of your pet's acceptance and eagerness. Always introduce any new diet over a period of 5 to 7 days, mixing increasing amounts with the present diet. Keep fresh water available at all times and offer plenty of exercise.

These projected feeding amounts are **ONLY GENERAL GUIDELINES**, based on data sourced from the "Nutrient Requirements of Dogs and Cats Animal Nutrition Series, National Research Council of the National Academies." Individual requirements will also vary based on specific metabolism, daily activity, age, genetics, health status, environment, outdoor temperature and other factors.

For best results, refer to your custom pet profile online for feeding guidelines.

DAILY FEEDING GUIDELINES (CUPS*)				
FOR PUPPIES				
	1 to <1 1/2 months	3 to 4 months	5 to 7 months	8 to 12 months
5-15 lbs	1/2 - 1	3/4 - 1 1/4	1 1/4 - 1 3/4	1 1/2 - 1 3/4
