

2026 SERVICE GUIDE

RECOVERY GPS (Guided Practice Success) In Home Collagen Focused Wound Protocol

Post-Surgical Dressing Protocol / Wound Care Dressing Protocol

OVERVIEW

WHAT WE DO:

Quality Recovery collaborates with surgeons and providers to ensure the seamless transition of high-quality surgical dressings from the operating room to the patient's home. Our collagen-based dressings support faster healing and tissue regeneration. With convenient direct-to-home delivery and easy-to-follow instructions, patients receive optimal care while minimizing the need for follow-up visits. This streamlined process not only improves patient outcomes but also enhances reimbursement opportunities, creating a new revenue stream for practices. By implementing Quality Recovery's in-home collagen dressing protocol, everyone benefits — patients, surgeons, and their practices alike.

HOW DOES IT WORK – Efficient Workflow

Our ordering, shipping, and delivery process for collagen dressings is fully aligned with CMS compliance. It incorporates eligibility verification, accurate documentation, and real-time tracking, ensuring every step meets regulatory standards. This approach reduces the risk of denials while enhancing overall efficiency.

QUALITY RECOVERY PRODUCTS

Recovery GPS Post-Surgical Protocol / Recovery GPS Wound Protocol

Quality Recovery surgical dressings deliver exceptional patient outcomes. Our collagen-based dressings are clinically proven to accelerate healing by supporting the skin's natural repair processes. They are breathable, flexible, and maintain optimal moisture control, all of which are essential for effective wound healing. In addition to collagen dressings, we offer advanced secondary dressings, each tailored to meet the unique needs of individual patients, providing optimal coverage and infection protection. With PDAC approval, Quality Recovery ensures both product quality and compliance, offering reliable reimbursement for healthcare providers.

PRIMARY DRESSINGS:

- Collagen Dressings: Are clinically proven to accelerate wound healing by providing a supportive scaffold for new tissue growth. These flexible, breathable, and durable dressings help control fluid and create an ideal healing environment, making them easy to apply and enhancing the body's natural healing process.
- Collagen Powder: Collagen powder, with its high surface area, deeply penetrates the wound to promote cell growth and accelerate healing. Studies have shown that collagen powders enhance tissue regeneration and can significantly shorten healing time, especially for chronic wounds.
- Collagen Gel: Helps maintain the ideal moisture environment for wound healing, preventing the wound from drying out, which is crucial for faster recovery and reduced scarring.

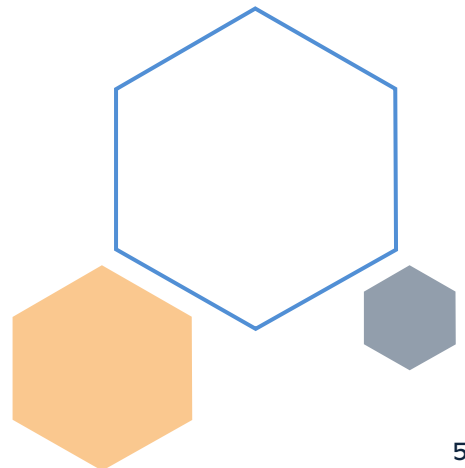

QUALITY RECOVERY PRODUCTS (cont.)

Recovery GPS Post-Surgical Protocol / Recovery GPS Wound Protocol

SECONDARY DRESSINGS:

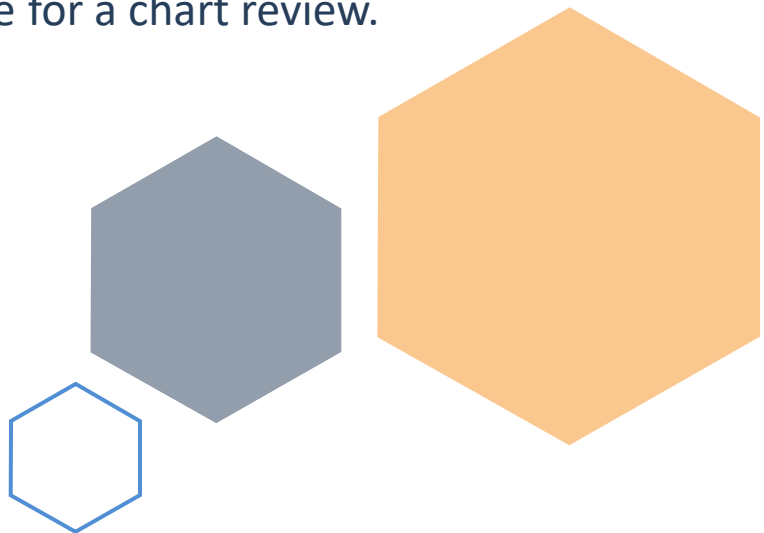

- Super Absorbent Polymers (SAP): Effectively manage wound exudate by quickly absorbing large amounts of fluid, maintaining an optimal moist environment, preventing skin maceration, and promoting faster healing. PDAC-approved for daily use. Water resistant.
- Silicone Border: Gently adheres to the skin, providing secure protection, reducing pain during dressing changes, and minimizing the risk of infection or skin damage. PDAC-approved for daily use and water resistant.
- Adhesive Border: Wound dressing provides secure, long-lasting adhesion, ensuring the dressing stays in place, minimizes the risk of contamination, and promotes a clean, protected environment for optimal healing. PDAC approved for daily use and features a waterproof backing to protect wounds from external contaminants.

QUALITY RECOVERY PORTAL

Our HIPAA-compliant portal is designed to optimize your practice's workflow from start to finish. This secure, user-friendly platform keeps your practice organized, informed, and focused on delivering exceptional patient care.

- **Communication:** Facilitate seamless communication and order management between your team and QR in one location.
- **Insurance Verification:** QR handles patient verification of DME benefits
- **Real-Time Order Tracking:** Verify, approve, track, and analyze all orders.
- **Support:** Quality Recovery's service team will offer support to ensure compliant claim management.
- **Compliance:** Access detailed records and documentation ensuring compliance for a chart review.

WOUND PROTOCOL ONBOARDING SUPPORT

Quality Recovery is committed to providing your practice with the tools and support necessary for a successful wound protocol. Our streamlined onboarding process and training ensures a smooth transition and ongoing assistance for your team.

Onboarding Process

Designed to respect your staff's time, our onboarding process delivers targeted training to key team members for maximum efficiency.

TIMELINE CHART:

- **Training:** Surgery schedulers are trained to proficiently manage the verification and ordering process, while the billing team is equipped to handle claims and reimbursement management.
- **Guidance:** We guide your team through their first patient order, from verification to claim submission, ensuring they fully understand the entire workflow.
- **Learning Tools:** Select from live training sessions for real-time interaction or on-demand modules for flexible, self-paced learning.
- **Support:** Your account manager offers personalized support throughout the onboarding process and beyond, ensuring a smooth and seamless experience.

QUALITY RECOVERY RESOURCES

Quality Recovery equips your team with continuous resources and tools to maintain efficiency and ensure compliance.

- Direct Contact: Assigned QR team member for tailored, personalized support.
- Resource Library: All documentation and flyers conveniently available in one place.
- Digital Room Access: Detailed training modules.
- QR is a fully licensed DME and service provider nationwide.

ENHANCED PATIENT EXPERIENCE

Quality Recovery extends your care to the patient's home, offering resources that improve wound outcomes, enhance compliance, reduce staff workload, minimize risks, and promote faster recovery.

1. **Faster Healing:** Collagen-based dressings promote tissue regeneration and provide a supportive environment for wound healing, accelerating recovery and improving overall outcomes.
2. **Reduced Risk of Infection:** With sterile, high-quality dressings delivered directly to the patient's home, the risk of infection is minimized as the patient uses the appropriate, clean materials for their wound care.
3. **Improved Compliance:** The convenience of having all necessary supplies, along with clear instructions, helps ensure patients follow their treatment plan more consistently, leading to better adherence and fewer complications.
4. **Convenience for the Patient:** Drop-shipping the wound dressing kit directly to the patient's home eliminates the need for multiple trips to the clinic, saving time and reducing the patient's stress during recovery.
5. **Empowered Self-Care:** With comprehensive resources such as instructional videos and personalized support, patients can confidently manage their wound care at home, leading to increased independence and satisfaction in their recovery process.
