

You may think you're safe and that you'll never have any painful joint issues, but when you check the surgery unit stats you'll figure out that you're chances of avoiding it are terrible. This one report could save you hundreds of thousands of dollars or better yet, your joints.

“Want To Save Yourself The ‘Pain’ Of Surgery... Without Spending A Fortune?”

Lima, Ohio~

Are You Qualified?

This special report is for you since you have painful, creaky joints, shoulders and joint stiffness in the morning, or inflammation. And as far as age goes, it doesn't matter how old or young you are.

If you have issues with your joints, and you said you did, this report is important for you to read before you make any drastic decisions concerning surgery.

You or someone you know was hurting so you wanted to find out if we could help.

Well you probably don't get up and down like you did when you were in your twenties and you think your age dictates that degree of mobility, but let me assure you of something. The things we can help you do can increase your mobility and decrease if not eliminate your pain, so keep reading.

That's why this report is exactly what the doctor ordered.

Let's be clear though.

If you're like me, you want your friends and family to be as healthy as they can be and you yourself don't want to end up in a wheelchair or hobbling around like a poor old

man or woman. Every time I go to the store there are people in those little mobile devices because of some type of walking issue.

I know that's the big reason you want help. I want you to know I'm sharing this report with you today because I want to help you and I have dealt with hundreds of people just like you. If you're a normal human being you want the solution to your joint pains. I care about people but I can't help you if you didn't start the process.

Listen, if you're:

- **serious about your health and the health of your joints and**
- **you want to get rid of your pain,**
- **slow down that nasty discomfort you have on a daily basis,**
- **help those creaky joints, so you can move better or**
- **you just want to get a better range of motion in your joints...**

... read this special report in it's entirety. This report is not that long and I wrote it so you'd know more about your joints and how to help the problems you're currently having.

Who's The Expert?

I can tell you this. If you're taking drugs, you MIGHT feel better, but nothing is happening inside your joint. Drugs just cover up your symptoms. If you don't believe me Google it. If you think surgery is the answer, I'd read this report and find out what happens to a lot of people that get joint surgery.

There are people, as well as doctors that will tell you that joint surgery is safe when any kind of surgery is "iffy."

Why am I saying that surgery can be 'iffy?' I don't know about you, but when you're talking about any joint surgery - you're talking about a number of things that could go wrong with the operation. Again Google joint surgery and watch the videos that are on YouTube. I think you'll be surprised at what they do to a joint replacement patient.

Here's just a few things that can happen.

There are variables and things to consider like:

- ✓ **getting an infection,**
- ✓ **have an overload of inflammation that hangs out and never seems to leave,**
- ✓ **a surgeon operating on the wrong joint, which happens more than I want to tell you, etc.**

Now I know. You have a lot of options when it comes to you taking care of your joints, but for me, surgery is going to be my last resort no matter what anyone says if I ever have joint problems.

TRUTH: All I'm telling you is that surgery isn't in the cards, SO what are your options. Well you can try some supplements, and I'm good with that as well. In fact if you become a patient I'm going to tell you exactly what you can do to help your joint, at home, even if your joints are creaking and giving you all kinds of fits. People that become patients are amazed at what this has done for them if they stick to it for a few months.

Here's My Promise To YOU.

Our joint rehab and restoration program is different.

How?

Well that's simple. This joint rehab and restoration program will get you some pretty quick results, but here's my disclaimer.

Your results depend on:

- **your health history,**
- **how long you've had the joint problem,**
- **your commitment level,**
- **if you show up for your treatments,**
- **your age,**
- **how you injured your joint,**
- **how good you are about following orders,**
- **your activity level,**
- **if you do what we tell you to do at home, plus**
- **what kind of drugs you've had in the past or are currently taking to alleviate your joint pain.**

SIDENOTE: If you've already had surgery I'm not telling you that I still might be able to help you, but I'm also going to tell you if I can't help you. Who knows what could happen? You're not a patient yet.

Again let me be clear. We're here to help you anyway we can so we'll find out more about your unique situation when you come to the office the first time. Your consultation will be an in depth private consultation where I ask you some questions and find out if I can help you.

There Are No Guarantees With This Program

I want to be upfront with you and make sure you understand this point. This is not some kind of discount outlet. I'm a doctor that cares about each and everyone of my patients on an individual basis.

You are not a number here! I care about anyone that makes an inquiry at the office, but I also want you to know I cannot and will not guarantee you anything because that would be wrong for me to do that. I can tell you this however.

We as a health care facility are going to do everything in our power to help you get the best results possible - as fast as possible. That's my promise to you, and I stand behind that promise.

Now you might be saying to yourself, "So why should I believe you?" And that is a good question.

All I can tell you is this. We're credible, we want to help anyone that has a health condition, we specialize in joint pain relief, but more importantly we care about you as a person. We care about your health, and the outcome of your case. Here's why I say that.

As a doctor I've been in this community for years and I am not going anywhere soon. The entire staff at this office is committed to helping you get better as fast as possible.

You might think you're different and you've tried everything and nothing has helped. That happens some times, but I'm going to let you in on a little secret. We've helped people like that, so we've been there and done that.

You might think you're beyond help, but that's what your initial screening is all about. We're trying to find out if you were a candidate for our type of care.

But make a note of this. If you were not a candidate and needed surgery I tell you that straight up. If you don't have a medical surgeon I would refer you to a competent surgeon if you don't have one while still supporting you anyway that I could.

Why We Do Things Differently?

My staff only schedules people to my report of findings that I feel I might be able to help. We do this because I only want patients that I feel I can help, but as a team we also don't turn our backs on anyone that has reached out to us for help.

I want you to know that people know we care.

Here's two testimonials from patients that we've treated with this unique joint care management system and their thoughts.

Testimonial from Lima Ohio

"I came to Dr. Gorman because I was having trouble going up and down steps and my joint was starting to go out of me and buckling. I also had plan fasciitis in my foot and between the two could barely walk and mow the yard. Yesterday I moved the yard with no pain at all. I go up and down the steps with no problems. My joint doesn't give out on me any more and I'm very satisfied."

-Phil, Lima Ohio

"The foundation of success in life is good health: that is the substratum fortune; it is also the basis of happiness. A person cannot accumulate a fortune very well when he is sick."

Testimonial from Deb in Lima:

"What brought me in was the pain I was having in my joint, I was barely able to walk. I thought I was going ot have to live with it. I saw an ad in the Lima News and I didn't know what else to do or where to turn so I thought I would try it. I've been here a few times and I'm totally amazed. I mean totally amazed. When I say that I am almost 85% out of pain. I've never been able to walk as good as I am now. I've never been able to jointl on my joints and I did it the other day without even thinking while I was cleaning out my car, with no pain! Those that know me knoe for a fact that I would never do that because of the pain that I was in. I'm very thankful that I have come here, I believe it was a god send. I thankt he staff and Dr. Patrick

Deb, Lima Ohio

We want you to trust us from the get go, but we also want to earn that trust. We need your commitment to move forward though. You have not selected the joint program as of yet, and I'm worried about you. That's why I'm sending you this report.

A lot of people tell us they're ready to get help, but then they end up missing appointments, and not following the necessary protocol that gets results that they were originally looking for. If a patient is not on board 100%, then we will dismiss them.

As I'm writing this report on my computer I'm trying to think how I can help you the most and here's what I've decided to do. I'm willing to give you a set of x-rays, (if necessary) an in depth consultation and fact finding session, a complete range of motion joint examination, plus the first week of care for one low fee.

Why would I do that?

Because I know in my heart that if you experience our friendly staff, and how we all care about all our joint patients you'll never want to go anywhere else. We're like family here, and we take care of our own.

So with that said if you take action today, I'll give you an additional 25% off the normal fee that I give to friends and family. It's my way of passing it forward, and since you said you really want relief, I'm going to extend this special offer to you for the next 7 days.

I've enclosed a certificate at the end of the report with a date. If you call and schedule before that date we'll reserve your spot, and make sure you get the reduced family rate for your first entire week.

There's more details about failed joint surgeries in this report, but before I show you that I'm going to give you a little heads up. The people that take action do something to get results. The ones that "sit" on the fence and think and analyze everything usually get worse and end up getting surgery.

Before I tell you the secret to helping your joint potentially heal itself I wanted to share with you the five reasons why getting your joint replaced can fail miserably. I'm not telling you to get surgery, I'm not telling you to avoid surgery. All I'm telling you are the facts. If you decide to get surgery I will support you all the way. I may not agree with your decision, but I just want you to do what you think is best.

Five Reasons Why Joint Replacements Fail

While most joint replacements will function well for years according to the manufacturer, patients with bad joints should be aware of the signs of failure—including **increased pain** or **decreased function**—that may require a "corrective procedure" known as revision total joint replacement.

That means if you start to have more pain or your joint starts to lose some of its function after your joint surgery, there's a good chance that you'll need *another* joint surgery to correct the problem.

"A failed joint implant is usually caused by wear and tear with **subsequent loosening of the implant**. There's no way any doctor or surgeon can guarantee that you're

not going to have a loose implant. Other causes are infection, instability, fracture, or stiffness," that's what a hip and joint specialist in New York City had to say about joint surgery.

Each year, more and more patients elect to receive revision joint surgery despite the fact that their original surgery was performed and they are having the same or more joint pain.

What Are The Symptoms Of A Failed Joint Surgery

This is something you need to be aware of. The most common symptoms of a "failed joint implant" are:

- pain,
- some instability,
- some swelling in and around the joint plus
- some stiffness across the entire joint (generalized) or in a small section (localized).

You can have one or all of the symptoms above. Every failed surgery is different.

Although joint replacements can function up to 15-20 years, specialists say there are five primary reasons why a joint implant fails:

#1 Reason: Wear and loosening: Friction caused by joint surfaces rubbing against each other wears away the surface of the implant causing bone loss and loosening of the implants. A fake joint is never going to function as good as the original.

#2 Reason: Infection: Large metal and plastic implants can serve as a surface onto which bacteria can latch. You do not want an infection. If you get a bad infection you could end up losing your leg from the joint down.

#3 Reason: Fracture: Fractures around the joint implant that disrupt its stability and may require revision surgery. You have to be careful as a fall or slip could mean more surgeries.

#4 Reason: Instability: A sensation of the joint "giving away" may mean that the soft-tissue surrounding the joint is **too weak** to support standing and walking. Improperly placed implants may also cause instability. If the implant was improperly placed you're going to need additional surgeries.

#5 Reason: Stiffness: Loss of range of motion which causes pain and a functional deficit. Isn't it better to get an alternative type of care vs surgery?

Here's the deal.

Revision total joint replacement is what they call a complex surgical procedure that requires extensive pre-operative planning, specialized implants and specialized tools, prolonged operating times and mastery of difficult surgical techniques.

It usually takes longer to perform the second surgery than the original joint replacement and is composed of the following stages:

Pre-surgery: Preparation includes you getting X-rays, more laboratory tests, joint aspiration and in some cases additional assessments, such as bone scans, CT scans or magnetic resonance imaging (MRI). That's more radiation.

Surgery: The implant is removed and bone grafts may be used to fill larger areas of bone loss. In some cases, metal wedges, wires or screws may be used to strengthen the bone. I can tell you the body doesn't like wedges, wires, and screws in it, but there is no way around them if you're getting surgery. Finally, specialized revision joint implants are inserted. Again this is a tedious process and you can get an infection.

Post-operative care: This is very similar to the care of the original joint replacement. There's a combination of physical therapy, blood management and pain medication. A brace or splint may be used to protect the joint after your surgery.

One specialist says he cautions that complete function is not restored for all patients and "up to 20 percent of patients may still experience pain following surgery for months or even years." I've always felt why get a dangerous surgery if there's a good chance that I'll have the same pain and there's an alternative that I should try before getting surgery?

Doesn't make sense to me.

So it's decision time. Call the office now and schedule your consultation. If you talk to me and we can't help, you'll walk out owing me nothing. I'm here to help. If I can I will with your permission, and if I can't, we'll shake hands and call it a day.

I've included a certificate on the next page. Either bring this report with you or just bring the certificate. That way I know that you received this report and that you are entitled to the special family fee. I look forward to helping you very soon. All the best.

Dr. Patrick Gorman's
**Joint Pain Rehab and Restoration
Certificate**

This certificate allows the holder to receive:

- ✓ A complete set of joint x-rays, (if necessary) to find out the structural integrity and stability of your joint.
- ✓ An in depth consultation with the doctor to find out your entire health history. If you are taking any medications please bring a list of any and all medications you are currently taking.
- ✓ A complete range of motion joint examination so the doctor can evaluate and assess the condition of your joint.

“You must mention or bring this certificate to the office within seven days of receiving this report to acquire this above mentioned package as a participating family member.”
