Top stories of the week

➤ April marine fuel sales in Singapore, the world's largest bunkering hub, dropped to its lowest level since February 2025. The city-state's total demand for conventional and biofuels reached 4.31 million mt in April, down 1.2% from last year and 8.7% lower than March bunker sales, according to data released on Thursday by the Maritime and Port Authority of Singapore (MPA). Sales in the first four months of 2026 totalled 18.82 million mt, up by 8.4% from 17.36 million mt for the same period last year. This indicates that the Iran conflict has likely contributed to an increase in bunker demand in Singapore at the start of this year. Singapore saw a record annual total of marine fuel sales in 2025 of 56.2 million mt. If the first four months' sales levels were repeated across the whole of the year, this year's total would reach 56.5 million mt, up by 0.5% on the year. VLSFO sales were 2.19 million mt in April – the lowest since February 2025 – and down 6.3% on the year and by 2% from March's level. HSFO sales totalled 1.79 million mt in April, up by 5.1% from last year, but down by 7.6% from the previous month of March. HSFO accounted for 41.5% of April sales, up from 39% share last year. Distillate sales dropped sharply in April and touched 256,100 mt – the lowest since at least January 2023. Sales were 18.6% lower on the year and 27.3% from March levels. MGO prices have seen the sharpest impact from the Middle East conflict, and this may have prompted lower consumption. Biofuel bunker blend sales sank by 33% on the year and 19.5% down on the month to 74,400 mt in April. LNG bunker sales - which this article counts separately from the conventional and biofuel bunker total reported above – inched up 1% on the year but dropped by 13.5% on the month to 42,400 mt in April.

OVERVIEW

This report contains the parameters of fuel prices and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflects the most strategic areas and hot spots that acts as a guiding line for the fuel prices all over the world.
