Top stories of the week

- Sales of low sulfur bunker fuel in Singapore may be lower in October over September, according to estimates seen by S&P Global Platts. However, the price reporting agency said that sales of high sulfur fuel oil would probably be up on the back of bunker calls at the port by scrubber-equipped ships. Sales of low sulfur marine gasoil are also expected to be higher as weak differentials between low sulfur fuel grades may have led to products being substituted. Total bunker sales in Singapore stood at 4.2 million mt in September. October's figures are usually released in about a week's time. (*Ship & Bunker*, 5 November, 2020)
- The world's first LPG-fuelled very large gas carrier (VLGC) has completed sea trials, according to engine manufacturer Wärtsilä. BW LPG's gas carrier the BW Gemini has completed the trials after commencing them on October 20, Wärtsilä said in an emailed statement Wednesday. The ship was built in 2015 and had an LPG fuel supply system retrofitted this year. A further 11 BW ships will undergo similar retrofits. "LPG is powering this vessel while protecting the environment, and we look forward to demonstrating its benefits to the industry as shipping prepares for a future with zero-carbon propulsion," Pontus Berg, executive vice president for technical and operation at BW, said in the statement. "BW LPG thanks Wärtsilä for its collaboration on this industry-leading innovation, and for sharing our vision of achieving sustainability through cleaner energy". (*Ship & Bunker*, 4 November, 2020)

OVERVIEW

This report contains the parameters of fuel prices, and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflect the most strategic areas and hot spots that act as a guiding line for the fuel prices all over the world.
