Top stories of the week

➤ A senior Maersk executive has raised concerns over the future supply of low emission fuel for its ships. Interviewed by the Financial Times, the shipping giant's head of decarbonisation said there was a risk that the company would not be able to source sufficient alternative supply to fuel its zero-carbon ships. "[The oil companies] have not offered us any green methanol at a price point we can accept," Morten Bo Christiansen was quoted as saying. "You would have expected that your current supplier would help you find the new juice. But that has not been the case so far." Last week, Maersk announced a major green bunker fuel production deal in Spain. The deal, with the Spanish government, could produce 2 million metric tonnes annually. Maersk has spurned liquified natural gas as an alternative fuel option. The company's intention is to order ships that can run on green methanol within a year or two of their delivery. LNG has brooked some criticism over its emission credentials although it is an established player in the market for alternative marine fuels. (Ship& Bunker, November 7, 2022)

OVERVIEW

This report contains the parameters of fuel prices, and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflects the most strategic areas
