Top stories of the week

➤ Shipping firm UECC has received the first delivery of LNG as a bunker fuel at the Spanish port of Sagunto. The company's dual-fuelled ship the Auto Energy completed its first LNG bunkering operation in the Mediterranean on May 25, taking on gas from Repsol at Sagunto, it said in a statement on its website this week. The operation was the first instance of LNG being bunkered at Sagunto. "We are thrilled to have successfully bunkered LNG for the first time in the Mediterranean, thanks to the excellent collaboration with Repsol and the support of ESK and Sagunto Port Authority," Daniel Gent, energy and sustainability manager at UECC, said in the statement. "This milestone showcases our commitment to extending the reach of our sustainable operations, reducing emissions, and promoting a greener future for the maritime industry." (Ship & Bunker, June 2, 2023)

➤ The authorities in Egypt are preparing for the launch of alternative bunker fuel supply operations in their waters. Green fuel bunkering is expected to be available in the country soon, news provider Egypt Today cited Walid Gamal Al Din, chairman of the Suez Canal Economic Zone, as saying last week. A number of memoranda of understanding to establish green hydrogen and green ammonia plants in the country have already been signed, the report cited the chairman as saying. Egypt's government announced last month that Minerva Bunkering was the first international firm to have received a licence to supply bunkers in the country. The firm has already launched physical supply operations in the country. (Ship & Bunker, June 2, 2023)

OVERVIEW

This report contains the parameters of fuel prices, and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflects the most strategic areas and hot spots that acts as an outline line for the fuel prices all over the world.
