SYSCARE Cloud Backup

SYSCARE has implemented a secure and highly efficient cloud backup infrastructure using award winning Druva Insync Backup technology.

Now your critical data can be backed up over the Internet to our cloud storage with minimal effort.

Save Internet Bandwidth

We have the facility to "seed" or pre-stage the initial data using offline media such as USB disks to reduce the size of initial backup. Furthermore, data deduplication, compression and WAN optimization features significantly reduce the amount of Internet bandwidth usage. Global deduplication ensures that backups are successful even when mobile users are connected for short time intervals and on network connections of varying quality.
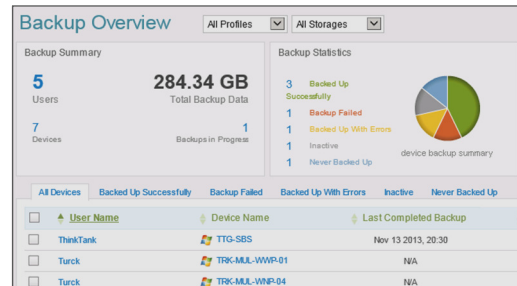

Cross-platform Backup and Restore

Backup Data on Laptops & Portables

SYACARE Cloud Backup can protect data on all PCs, laptops, tablets, and smartphones including employee-owned devices.
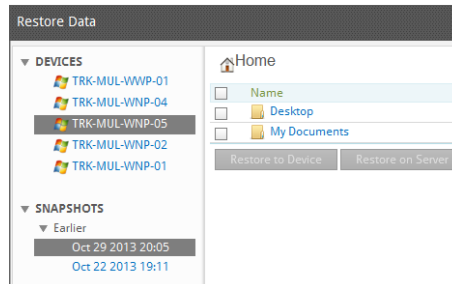

Users (or IT admins) can easily monitor the status of all backups from one console.

Prices starting from
50c per Gigabyte per month.

End-user Restore

Either the IT staff or end-users can directly restore data onto their desktop, laptop, server, or mobile device.

We can also restore data onto offline media and deliver to site for disaster recovery purposes. Most other cloud backup service providers offer online restore option only.

Managed Antivirus

Protect your endpoints from viruses and other malware and ensure their web browsing is safe in an easy and economical way with our managed antivirus protection based on powerful "Bit Defender" technology.

Starting from **$2.25 per user** per month.

Welcome to the Cloud Era

Cloud computing is now evolving like never before, with companies of all shapes and sizes adapting to this new technology. Industry experts believe that this trend will only continue to grow and develop even further in the coming years.

While significantly reducing the capital investment and ongoing costs of maintaining an IT infrastructure, now even small businesses can afford enterprise grade high-availability and fault-tolerant systems.

Implementing new servers and your corporate applications within the cloud takes only a couple of hours rather than weeks or months.

Switch to the Cloud with Confidence

Public clouds store customer data at "unknown" locations across the globe raising security concerns.

SYSCARE has established a secure "private cloud" facility using our own IT infrastructure housed within Tier-3 state-of-the-art NextDC data centres located in Australia.

We offer the highest level of availability using continuously replicated failover facilities at NextDC Sydney (S1) and Melbourne (M1) that provide geographic isolation.

Multi-core high-end servers utilising Microsoft Hyper-V & VMware vSphere virtualisation technologies combined with high-speed fiber Internet pipes deliver great performance and unparalleled user experience.

Hosted Virtual Server

Hosted Virtual Server (HVS) solution is an ideal information technology platform for small to medium sized organisations to rapidly implement essential business applications without incurring a large cash outlay.

HVS solution gives the customer access to a virtualised Microsoft Remote Desktop Server (Terminal Server) that is securely hosted within our "private cloud" infrastructure.
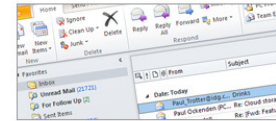

This is a fully secured centralised server environment providing easy access to corporate applications & data. In addition to Microsoft Office software, you have access to feature rich Microsoft Exchange messaging platform as well as SharePoint, SQL Server and any other third party applications that you need.

While the minimum start up number for HVS solution is only 5 users, the infrastructure is scalable up to 100 users. Price starts from **$150 per month**.

Your server & applications can be securely accessed from anywhere in the world using any PC, Mac, tablet or even from a Smartphone.
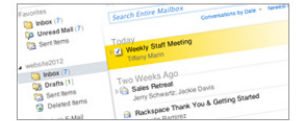

Hosted Exchange

Now you can leverage the power of full featured Microsoft Exchange Server with **Minimal Cost .**

On Your Desktop **On Your Mobile** **On the Web**

✓ Initial upload of mailboxes offline via USB disks; saving time, cost and Internet bandwidth.

✓ Active Directory Synchronisation to seamlessly integrate with your in-house user authentication infrastructure.

Ease of Use
- Immediate Activation
- Premium Spam & Virus Filtration
- User-Managed Mail Quarantine
- Auto Reply, Alias, Filters Unlimited
- User Mailbox Size up to 50GB
- Email Attachment Size up to 50MB
- Outlook 2013/2016 included if required
- Optional Archiving feature

✓ Prices starting from **$5 per mailbox** per month.

Full Features
- Global Address List (GAL)
- All Exchange Features
- Personal Calendar
- Shared Calendar
- Shared Mailboxes
- Distribution Lists Unlimited

Client Access / Mobility
- Outlook Web App (OWA)
- RPC over HTTPS (Outlook Any-where)
- ActiveSync
- iPhone / iPad / Android Support

Managed Anti-spam

Are your staff losing productivity due to thousands of spam emails reaching your mail server?
We can block all spam and malware and deliver clean emails to you for less than **$1.50 per user** per month. In addition to centrally managed filtering rules we can get users to manage their own quarantine, black lists and whitelists.

Email Archival

In many countries it is now a legal requirement for organisations to retain their electronic records including emails up to 7 years.

We can provide you peace of mind by centrally archiving all emails sent and received by the organisation with the ability for quick search and retrieve.
