## Filtration Stages

1. Three Catalytic Surface passes
2. Dual High Strength Internal Magnet pass
3. KDF media (eliminates chlorine, partial

## Benefits of the Protector

1. Transforms Chlorine into Chloride (which is harmless in water) & Removes partial chloramines (100% can be removed via a secondary -post- filter)
2. Removes toxic heavy metals (Arsenic, Cadmium, Chromium, Lead and Mercury)
3. Greatly reduces hard water scale
4. Uses zero electricity
5. No wasted water/no backwash required (less utility bills compared to other systems)
6. Zero maintenance/No salt
7. Longer life of all water appliances and fixtures (washing machine, dishwashers, faucets, water dispensing refrigerators, water heaters, coffee makers, shower heads, etc.)
8. KDF media acts as a biocide killing bacteria in city water sources.
9. NSF certified
10. 12+ years life span
11. Lowers surface tension (great for plant and human consumption)

## HOW IT WORKS

The Whole Home Protector uses a complex process to eliminate chlorine, partial chloramines, heavy metals, and bacteria.

The system greatly reduces hard water calcium scale from forming and lowers the surface tension in the water.

This 6 stages process includes a double high strength magnetic pass, 3 chamber catalytic surface and Kinetic Degradation Fluxion (KDF) media for filtration

With the water being an “up flow” design, no maintenance or backwash, drain, or electrical is required. This Whole Home Protector water treatment system is unique to the industry and patent pending with a service life of 12+ years.
