

## Energy supply

Through our strategic network of suppliers and in collaboration with the most important players in the industry, we specialize in offering competitive alternatives to satisfy your energy demand.

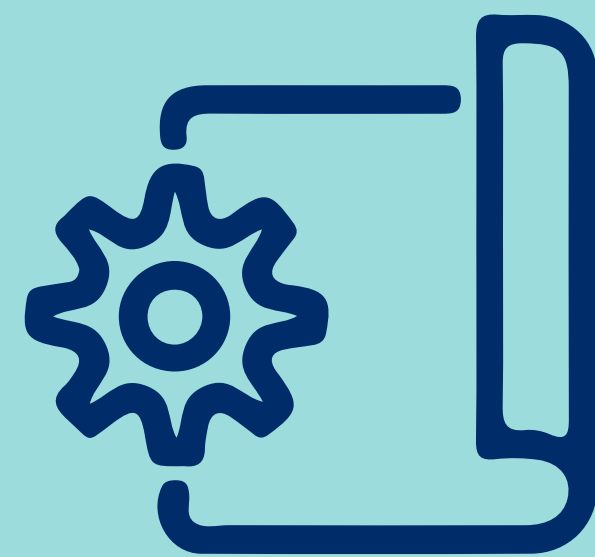

## Operations Support and Maintenance

Our experts team can offer you support on many aspects of developing, operating and maintaining your operations; from distributed generation to larger scale projects.

## Project Development

We can develop solar electricity and cogeneration projects for on-site industrial projects.

## Asset Management

We offer solutions that help manage energy assets to extract maximum performance without requiring new investment.

Our experience in managing transportation rights for power and other fuels allows us to maximize the value of these entitlements for our costumers while securing continuous and competitive energy supply.
