

Simple, Fast and Secure Connectivity for IoT/IoT Devices

FirstPoint delivers a secure Connectivity Management Platform (S-CMP) solution that enables MNO and MVNOs to provide enterprise customers with visibility control over IoT network management and security.

The growing deployment of IoT devices across the enterprise creates many challenges for CIOs and IT Managers. These challenges include complex connectivity and device management, vulnerability to security risks and threats, lack of network visibility, control and customization options

Solution Benefits

FirstPoint empowers MNOs and MVNOs to provide advanced IoT connectivity management solutions to enterprise customers. Our Secure Connectivity Management Platform enables customers to manage and secure SIM/eSIM-based connected devices for multi-tenant accounts at scale.

Self-Managed Networks

Self manage IoT networks, without the need for MNO/MVNO support .

Fast Customer Onboarding

Our feature-rich IoT device management makes it easy to onboard new enterprise customers.

Robust Network Security

Deploy advanced real-time security mechanisms via the FirstPoint SIM/eSIM security applet.

Easy Setup and Deployment

Get up and running via a simple and easy to use cloud based interface.

Secure Connectivity Management Platform

The FirstPoint Secured Connectivity Management Platform (S-CMP) is a scalable and secure enterprise-grade private mobile core that supports various cellular technologies, including 2G-5G, NB-IoT, and LTE-M. Our S-CMP solution is ideal for use in a wide range of IoT cases.

Feature Highlights

FirstPoint simplifies IoT connectivity and device management processes, streamlines business functions, automates routine back-office operations, generates real-time security alerts and create a more efficient and productive network environment.

Automatic Security Alerts

Multi-Tenant Support

Unlimited Scalability

Public-Private Roaming

Real-Time Network Monitoring

API Automation

PaaS /IPaaS Infrastructure

Back-Office Automation

FirstPoint delivers a cloud-based IoT Connectivity Management Platform that simplifies the complexity of IoT connectivity, reduces operational costs and automates back-office account management and billing processes. FirstPoint enables Mobile Network Operators (MNOs) and Enterprise Io/IoT service providers to deploy, secure and manage any type of IoT device across private, local and roaming networks, at any scale. FirstPoint is available based on a SaaS or PaaS business model and is suitable for deployment across a wide range of use cases including logistics and supply chain operations, Industry 4.0, Smart Cities, Agriculture, campus networks and remote isolated networks. Established in 2018, FirstPoint Mobile Guard Ltd. is based in Tel-Aviv, Israel.
