

Discover Your Third-Party's Cyber Risk

About Us:

Sling helps your organization discover and manage your supply chain cybersecurity exposure and risks. With unique sources and breakthrough methodologies, we enable proactive defense and preemptive action against any third-party's cyber breach.

The Growing Occurrence of Third-Party Attacks:

If a third-party has integrated systems with a company, any attack on the vendor could potentially harm the company as well. Furthermore, a third-party's service decline or shutdown can cause disruption and negatively impact a company's business continuity. As such, the most effective way to address this threat is to maintain continuous monitoring of a company's third-party's cyber risk.

% of organizations reported supply chain disruptions

A third-party breach today can be your risk tomorrow.

Sling's Solution:

Sling adopts a holistic approach to third-party cyber risk evaluation, utilizing a wide range of intelligence sources to examine third-party's from a comprehensive unique cyber perspective.

Sling's 4 Steps To Assess Your Third-Party Risk:

- Asset Discovery**
 - A non-intrusive, automated process. All we need is your third-party's domain name; the rest is for us to map and discover.
- Ongoing Monitoring**
 - Continuously perform an agentless scanning of the company's third-parties by leveraging 10+ years of cyber experience and CTI to detect potential threats and take precautionary measures to mitigate risks.
- Sling-Score**
 - The detected threats are analyzed by Sling's Cyber Threat Intelligent experts. A proprietary AI algorithm that calculates the analyzed data and calculates it into a holistic Sling-Score, determining third-party's risk for potential cyberattacks with high SNR (minimum false alarms).
- Remediation**
 - For each finding, Sling provides clear actionable instruction, to ensure the remediation of the risk.

Empowering third-parties to discover their cyber risks with Sling.
