

BIOMENTUM[®]

Our Solutions Are Your Solutions.

A powerful blend of beneficial microbes for healthier soil, stronger plants, and naturally better results.

HEALTHIER
SOIL.
STRONGER
PLANTS.
A BRIGHTER
TOMORROW.

KEY BENEFITS

REAL BIOLOGY. REAL RESULTS.

IMPROVES NUTRIENT AVAILABILITY

Helps unlock and mobilize tied-up nutrients so plants can use what's already in your soil.

BUILDS STRONGER ROOTS

Supports early development, greater root mass, and improved water and nutrient uptake.

SUPPORTS PLANT HEALTH

Helps plants naturally resist stress and perform through challenging conditions.

BUILDS A HEALTHIER SOIL ECOSYSTEM

Increases microbial activity, improves soil structure, and supports long-term productivity.

MAXIMIZES YOUR INVESTMENT

Improves nutrient efficiency, helping you get more from your inputs.

HOW IT WORKS

Biomentum combines beneficial bacteria, fungi, and mycorrhizae to create an active soil environment. These microbes help cycle nutrients, improve root access, and support plant health from the ground up.

A MORE ACTIVE SOIL.
A MORE PRODUCTIVE YOU.

POWERFUL NATURAL INGREDIENTS

A DIVERSE AND FUNCTIONAL MICROBIOLOGICAL COMMUNITY.

BENEFICIAL BACTERIA

Cycle nutrients, fix nitrogen, and support plant health.

MYCORRHIZAE

Extend the root system for greater nutrient and water uptake.

SAPROPHYTIC FUNGI

Break down organic matter and build soil biology.

FLEXIBLE APPLICATIONS

FIT IT INTO YOUR PROGRAM.

In-Furrow

Foliar

Broadcast

All Crops

Use Biomentum in a variety of crop programs to support early growth, improve nutrient efficiency, and build long-term soil health.

MEASURABLE FUNCTIONAL BENEFITS

NITROGEN FIXATION

Very High (95th percentile)

One of the product's strongest functions. Supports natural N inputs for reduced or partial replacement of synthetic N.

PHOSPHORUS MOBILIZATION

Very High (80th percentile)

Strong capacity to unlock bound phosphorus, especially in calcareous, high-iron, or weathered soils.

CALCIUM TRANSPORT

High (72nd percentile)

Supports nutrient transport and directly contributes to cell-wall integrity, post-harvest firmness, and shelf life.

NITROGEN RETENTION

Not Loss (Denitrification)

Low denitrification (9th percentile) and methanogenesis (1st percentile) mean more of your N stays in the soil for plant use.
