## The Power of Humic Acid, Amino Acids & Biomentum®

ABC is a synergistic blend of humic acid, amino acids, and Biomentum® (beneficial microorganisms) that works with natural biological processes to improve soil function, nutrient cycling, and crop resilience.

ABC is a soil biology activator—not a fertilizer.  
It improves nutrient availability by enhancing biological nutrient cycling and soil function.

## THE THREE POWERFUL COMPONENTS OF ABC

### AMINO ACIDS

Support microbes and help plants perform under stress.

- ✓ Provide a readily available carbon and nitrogen source for microbes.
- ✓ Help plants cope with heat, drought, and other stresses.
- ✓ Stimulate root growth and root exudates.
- ✓ Reduce the energy plants spend, producing amino acids.

### BIOMENTUM®

(Beneficial Biology)

A diverse blend of beneficial bacteria and fungi that work for you.

- ✓ Accelerates residue decomposition.
- ✓ Mineralizes nutrients from organic matter.
- ✓ Improves phosphorus availability.
- ✓ Enhances nitrogen cycling.
- ✓ Produces compounds that stimulate root growth.
- ✓ Competes with soil pathogens.
- ✓ Improves soil aggregation through microbial activity.

### HUMIC ACID

Conditions soil and enhances nutrient availability.

- ✓ Increases cation exchange capacity (CEC).
- ✓ Chelates micronutrients, increasing their availability.
- ✓ Improves soil aggregation, infiltration, and aeration.
- ✓ Increases water-holding capacity.
- ✓ Buffers the root-zone environment.
- ✓ Provides a carbon source that supports beneficial microbes.

## STRONGER TOGETHER – THE ABC SYNERGY

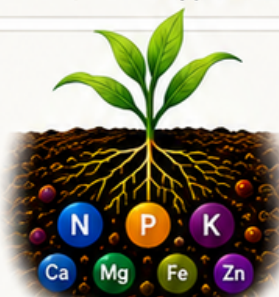

+

+

=

Stronger roots.  
More nutrients.  
Healthier plants.  
Higher yields.

## WHY ABC WORKS

**Improves Root Development**  
Deeper roots improve water and nutrient uptake.

**Better Soil Till & Aggregation**  
Improves infiltration, aeration and workability.

**Faster Residue Breakdown**  
Returns nutrients to the soil faster.

**Improved Water Infiltration**  
Increases water-holding capacity and reduces runoff and leaching.

**More Consistent Nutrient Uptake**  
Increases macro- and micronutrient availability and uptake.

**Increased Resilience to Stress**  
Helps plants withstand heat, drought, and disease.

**Greater Nutrient-Use Efficiency**  
Healthier soil biology and efficient nutrient use lead to higher yields.

## NUTRIENT CYCLING & IMPROVED SOIL HEALTH

1

### ORGANIC MATTER ADDED

Residue and roots enter the soil.

2

### MICROBIAL BREAKDOWN

Biomentum® helps break down organic matter.

6

### HEALTHIER SOIL, BETTER YIELDS

The cycle builds organic matter, soil health, and yield potential.

3

### NUTRIENT RELEASE

Nutrients become plant available.

5

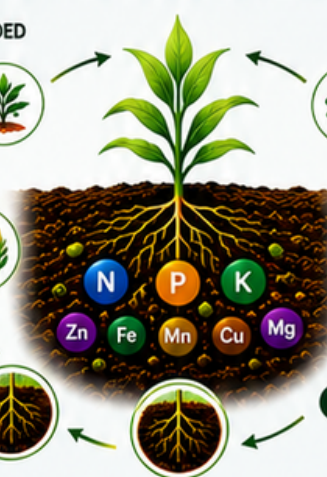

### MORE ROOTS & EXUDATES

Stronger roots feed microbes, improving soil structure.

4

### NUTRIENT UPTAKE

Plants absorb nutrients efficiently through healthy root systems.
