AM200 coverage: 100mm

- 1. Stop ends to be installed at flashing ends.
- Minimum Clearance between the AIR BARRIER and WINDOW JOINERY to be 45mm. Window Joinery should not be permanently fixed until cladding installed.
- 3. Sealant on each ends of the "J" starter board to prevent water going into cavity.
- 4. Timber Cavity Batten at 800mm max spacing.
- 5. Secure the AM029 clip with 1 screw for standard use, or 2 screws for added support

- 1. Minimum Clearance between the AIR BARRIER and WINDOW JOINERY to be 45mm. Window Joinery should not be permanently fixed until cladding installed.
- Apply a small amount of sealant to every meter of the AM016 cover clip. Report to Archimax if AM016 cover clips are loose or tight. Do not force to install.
- 3. Timber Cavity Batten at 800mm max spacing.
- 4. Secure the AM029 clip with 1 screw for standard use, or 2 screws for added support

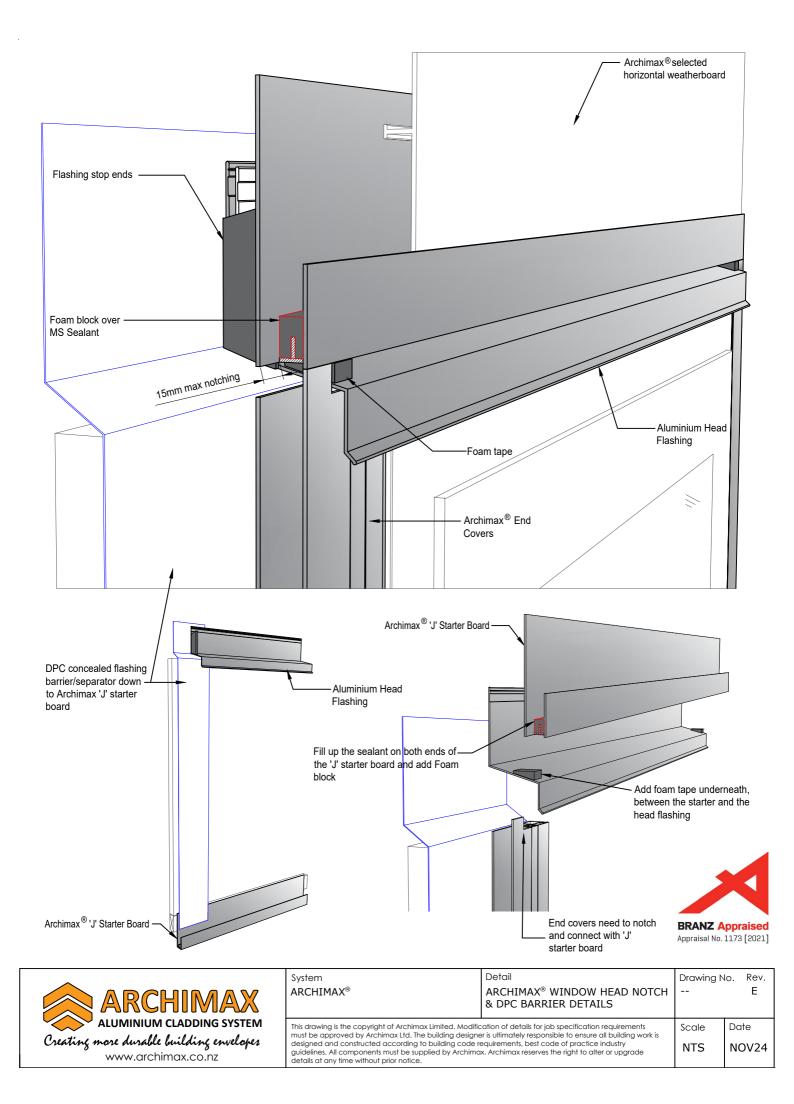

- 1. Minimum Clearance between the AIR BARRIER and WINDOW JOINERY to be 45mm. Window Joinery should not be permanently fixed until cladding installed.
- 2. Ideally, use 5mm compressible foam tape, or use sealant to seal the gap between window frame and Archimax cladding depending on the site situation.
- Apply a small amount of sealant to every meter of the AM016 cover clip. Report to Archimax if AM016 cover clips are loose or tight. Do not force to install.
- 4. Timber Cavity Batten at 800mm max spacing.
- 5. Secure the AM029 clip with 1 screw for standard use, or 2 screws for added support

BRANZ Appraised

Appraisal No. 1173 [2021]

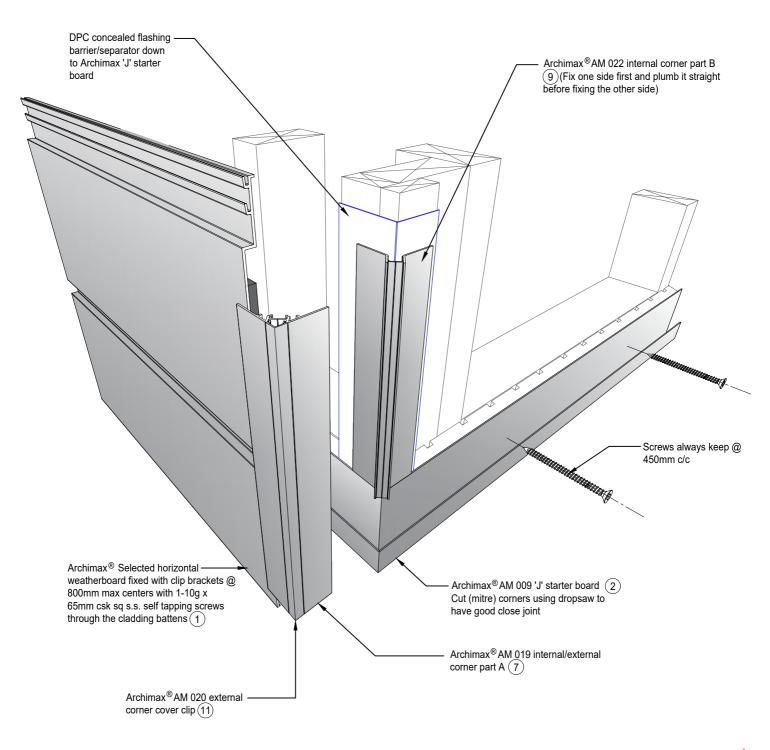

1. Fix the External Corner part B on one side first and plumb it straight before fixing the other side to avoid twisting.

- 2. Timber Cavity Batten at 800mm max spacing.
- 3. Secure the AM029 clip with 1 screw for standard use, or 2 screws for added support
