

COMPOSITE BAMBOO ACCESS MAT

DIMENSIONS
3900 x 2200 x 60 mm
12.8' x 7' x 2.4"

BAMBOO FEATURES
Naturally repels moisture
Renewable resource
More impervious to rot,
fungus and insects

WEIGHT
525 kg
1155 lbs

INTERLOCKING SYSTEM
Optional three finger locking system joins mats seamlessly

MATERIAL
Laminated Veneer Bamboo

MAT FEATURES
Rough non-slip surface
Beveled edging
Flush-fit, no trip hardware

APPLICATION ENVIRONMENT
Designed for use on non-prepared ground surfaces including mud, dirt, gravel, sand, and silt

IMPERVIOUS TO ROT, FUNGUS, AND INSECTS

BAMBOO GROWS 10X FASTER THAN WOOD

30-40% LIGHTER THAN OAK

LESS THAN 5% MOISTURE ABSORPTION

LESS PRONE TO SHRINKING OR WARPING

SAA STAINABLE
- M A T T I N G -

COMPOSITE BAMBOO MATS

These mats have been designed to overcome some of the natural limitations of timber. The panels in our design maximize on the inherent flexibility of bamboo, allowing them to bend on uneven ground. By incorporating new technology into traditional design, we were able to make our Composite Bamboo Mats stronger and less susceptible to breakage. Engineering the mats out of laminated bamboo allowed us to create a product that retains less than 10% water, compared to at least 30% moisture retention with traditional hardwood. This means that transportation costs between applications are a fraction of those with timber road systems.
