

Winter Break Week 2026:
Commercial Flooring Symposium Abstract
By: Gabriel Belanger Sauvageau, IICRC BMI Chair

Building Moisture Inspection (BMI) – The New IICRC Class

Moisture is at the heart of nearly every building failure. The new **IICRC Building Moisture Inspection (BMI)** course introduces a standardized, evidence-based framework for evaluating moisture conditions within structures. Participants will learn how to interpret readings, document assemblies, and understand how **water can** migrate. The presentation will highlight the material people will learn in the approved IICRC 3-day BMI course, the inspection methodology, psychrometrics, and report writing aligned with IICRC standards and inspector safety. Designed for inspectors, restorers, and consultants, BMI represents the next generation of moisture education—where measurement meets building science.
