

Point scale of some nations - *Updated 31.10.25*

This is a dynamic measurement, and the PDF-file will be updated according to main differences at a global scale. It can be decision making, interference, development within borders and infrastructure, and well being for the citizens. These measurements are strictly as a guideline for what is, and not what they could have been according to those who always know the best for others. Stop interfering in other nations if it is not wanted, in other words.

CQ and Time involved within calculations done due to creative self thinking and holographic matter

Scale: 0,01 - 1000,00

The U.S. - 220,01 (and rising)
The U.K. - 130,99
