

Illustration (Ranveig Sem): *Is this something you would like to see right before bedtime? She clearly does not care if your child is being exposed to serious criminal activities such as assault and abuse. Choose your wife carefully.*

(Public picture: <https://eurojuristemark.no/menneskene/>)

This document is basically written to make a clear point of view on how the system and its capitalistic system shapes society. We have sick lawyers only being heard due to educational papers. This is Dev globe 601. Welcome.

Pin points:

- She lies in court, and she is not under oath(?) - f***** joke
- She makes her clients lie under oath
- She only defends women born in the 80s
- She has gotten a clear message from the state attorney to stop the harassment
- She continues to harass in court cases
- It does not affect here that the child is being exposed to mental and physical abuse
- She takes the prosecutor's place in court, and manipulating judges that she forgot where to sit
- She is basically a manipulative b****, just as any other horrible lawyer without morals

As you might have read, there is a court case going on with a child involved. She has really done her best to blame the father, even though the evidence is quite clear that the mother is unstable, and she's violent. Money vs. moral.

Question: Where do morals and values come from, when you actively work to blame innocents?

Question two: What is the probability that she has a terrible situation regarding her own father and youth?

Question three: What will gain global communities and societies with lawyers like here?

So, by this meaning: If every lawyer is working out of these societal values we will fall to the ground of actions driven towards destruction of a society. Thank god for lawyers who speak up for what is good for your nation's society. Let's say that you can take on one job/mission, and what you do is to make the situation for a child much worse (Norwegian judges included). That means that fundamental core values of a functional society, which forms your people, are totally gone and it will make your national situation worse. This is why future generations are key

for survival of the species. Or human beings in other words, since nature itself will manage totally fine without us. Human beings are not needed to keep things moving, and certainly not lawyers like here. A disgrace for the nation.

An example: She could not face her ugly way of being towards a prosecutor's dialogue where she was put in place, so she had to put on her smile and pretend to be such a nice person towards the judge. Luckily in Norway, we have a magistrate called Håvard Skjeldås, who sees through her BS. It almost seemed that she was in love (?).

At her age being a woman, retirement is the only option. When you forget important things you have nothing to do in a court case or court meeting for that sake. What a f***** joke Norway has become, due to lawyers who do not care about justice or children. Eurojuris (Telemark), who bought the company, will face destruction in this region.

Ranveig Sem (and Eurojuris (Telemark)) will never be considered as a lawyer for great development, and their end of vanishment comes with the coupe
