

Consciousness Quotient 301

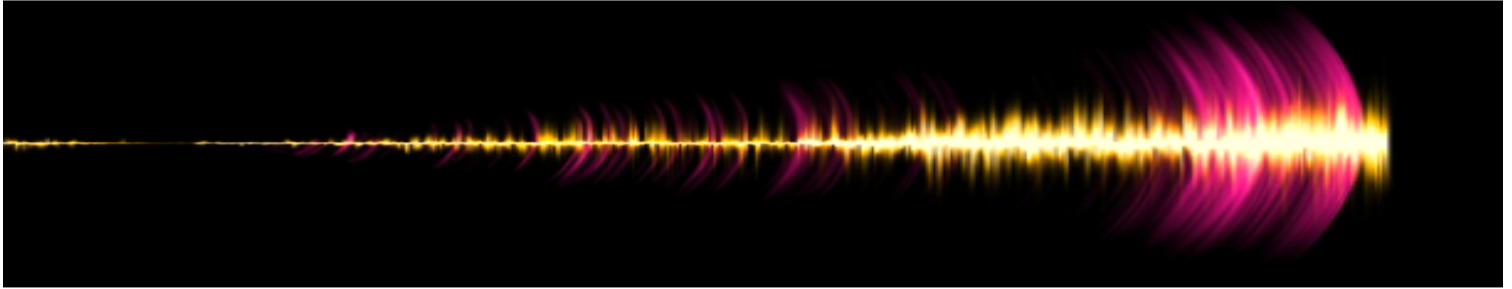

Illustration: Where do you want to die?

If you read this document, you live in the moment. Agree?

What makes you conscious?

What do you experience now when you read this?

Try to answer these questions before reading

Consciousness is as mentioned the ability to observe and experience the surroundings. And adapt to the surroundings as well. This is referred to as biomimicry into this specific matter. And Consciousness Quotient.

We can divide consciousness mathematically into 0,01-51,61. 51,61 is related to free will. Let's say that a habitable planet, as a planet, has the consciousness of 0,01 to function properly. It equals temperature, wind and so forth.

There seems to be a force which can easily switch what you are experiencing, if you are aware of it. You can be aware of it because you are a living being, being exposed to wave functions which seem to be the ground source of why you are being held together as a massive property of atoms and molecules. It might be the vibrational heart.

To raise your consciousness around a subject literally means that your mind is vibrating on a higher frequency level, and vice versa. It is the ego / the self / soul. When Buddah mentioned that the self does not exist he can be partially right. It exists because of you. It exists because of how the environment has changed you. No self equals no society (on Earth in 2023). This is vital to understand the Mirror-graphic principle. Our system holds humans down.

The thought equals a Ubit. The Ubit equals senses. Senses required equals environment.

Every being above 51,61 in consciousness is either God or highly evolved beings in contact with what can decide the future. This is where free will comes into the matter. You have slightly less than you might think.

An example: What is given to you is not in your control. But you have potential. The potential of 1,62.

Needed guidelines:

- CQ Doc1.1
- Religions and spiritualism Doc 1.1
- Mind & the environment relation Doc1.1

So, to raise the consciousness as many refer to: use your senses and live with acceptance. When you do this you can use your ego as a stairway to heaven. You can see this, experiencing that, but what does it actually do to yourself and your soul? Is it a lesson or is it a gift? Is your life worth more than others? Why do you even care about this?

The numbers to calculate consciousness in this document should be more considered as a ratio.

This is the ratio (regarding *Time*):

0,01 - Planetary

0,02 - Algae

0,05 - Insects

1 - Animals

2 and above - Human beings

3 and above - Interstellar ETs

These numbers are, as mentioned, a ratio for further understanding. Above equals potential, from birth.

Every number above two, has the possibility to achieve 51,61 of consciousness. Meaning, you are not re-born from an animal's spirit. The limit for spirits and souls is set above two of consciousness, for human beings.

Let's say that your brain is a receiver for the environment. The wave functions you are experiencing and triggered by, is only up to yourself on how to handle it. If you raise your consciousness you are more aware of what you are being exposed to. This is quantum. *Wave functions*. How your consciousness resonates on these levels is up to you. But it might require knowledge and understanding of the subject, solely because of how to see the self. Experience.

What do you experience now, when you have read this? Enlightenment equals understanding.
