

RECCE Site Investigation Ltd

Achieving Net Zero Mission Statement

RECCE Site Investigation Ltd has committed to reducing our Carbon Emission intensity by 2030, based on the current output of similar sized companies within the Uxo Mitigation and Geotechnical Site Investigation industry and achieving Net-Zero by 2050.

Our Net-Zero commitment is underpinned by a science based target to reduce our emissions by 50% of current comparable companies by 2030. We aim to achieve this with small steps which will be hugely effective. Our first goal is to implement stop-start technology on all of our vehicles and plant. This significantly reduces emissions by cutting idling time and reduces fossil fuel consumption. Our bespoke service packages are designed to reduce the number of vehicles required on site, which in turn reduces the CO2 emissions for every project by around 50%.

Our next goal will be to utilise technology to help us to reduce the number of employees required for office based administrative roles. We will achieve this by combining readily available technology with our soon to be completed application, which will enable RECCE Site Investigation Ltd to deliver a modernised, fully integrated and easily accessible administration system which will enable our customers to book services, share live project information and view all relevant project information with the entire project team in one secure location. This significantly reduces the need for a large office space and a large number of administration staff, again reducing our CO2 emissions even further.

Our commitment to achieving Net-Zero by 2050 will adapt and change as technology develops and the infrastructure for fully electric vehicles progresses. RECCE Site Investigation Ltd aims to be at the forefront for the drive towards fully electric or hydrogen powered vehicles and plant and our aim is to offer a fully electric, zero emissions dynamic sampling package before our Carbon Emissions Intensity target of 2030, with a proposed company rollout shortly after.

RECCE Site Investigation Ltd has registered with the SBTi and are committed to following the NET-ZERO Standard. We have submitted our commitment letter to become a member of the Business Ambition for 1.5°C Campaign

Craig Barnett
Managing Director
