REMAIN ON
TARGET!

WE FORECAST
HEATWAVES
BEFORE OTHERS
EVEN MENTION
THE POSSIBILITY!

The latest available and trending and repeating runs of both the GFS (Global Forecast System) and ECM (European Computer Model) projections show high pressure-influenced weather and some further warm to even hot or uncomfortable feeling temperatures developing over 2-3 days from this weekend (some places could be muggy and cloudy with early but sporadic thunderstorms as covered in previous updates below for this same period).

Additionally, they also show a significant breakdown to widespread thunderstorms and flooding possibilities beyond this, and whilst turning gradually much cooler and autumnal and more unsettled for all during late August but prior to another period of heat or major heat and high pressure building in across our shores during early September for a 'specific date' and ALL forecast details matching our recent updates on all this below and within our longer range forecasts to our subscribers for September.

<https://www.facebook.com/share/p/1czyr6tcSw/>

ALL the above forecast details were also available significantly earlier to our members and via the advanced weather services + now also include Autumn 2026 and Winter 2026/27, covering September to early March 2027:

<https://exactaweather.com/advanced-weather-service>

Also, ALL the above and recent forecast details above are as covered in our last several publicly dated updates dated over several weeks for these same days and dates:

<https://www.facebook.com/share/p/1BhJxLkF2U/>

<https://www.facebook.com/share/p/19Ak8ZHAfU/>

<https://www.facebook.com/share/p/18rm8A3YVx/>

<https://www.facebook.com/share/p/1GWmwCTabM/>

The record-breaking summer we more than foretold about with exact and specific forecast details on our part is not exactly finished with us yet in terms of heat or warmth and also heading into autumn and September/October and as covered from several weeks earlier in our unchanged seasonal reports...
